REPORT

TO

HIS EXCELLENCY IVOR CHURCHILL, BARON WIMBORNE,
&c., &c., &c.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

I have the honour to submit, for your Excellency's consideration, the Fifty-first Annual Report of Marriages, Births and Deaths in Ireland, containing the details for the year 1914.

The outstanding features in connection with the Statistics for 1914 embodied in this Report are as follows :—The birth-rate (22·6 per 1,000 of the population) was low ; the marriage-rate (5·41)—number of marriages per 1,000 of the population—was the highest since 1867 ; the death-rate (16·3) was the lowest recorded in Ireland since 1868 ; and the emigration-rate (4·6) is much below that for any year since Emigration Returns were first compiled in 1851, while the estimated population in the middle of 1914 shows an increase of 2,386 on the estimate for the middle of 1913.

GENERAL SUMMARY.

The following Table (I.) shows that the Marriages registered in Ireland during the year 1914 numbered 23,695 ; the Births, 98,806 ; and the Deaths, 71,345. The marriage-rate was 5·41 per 1,000 of the estimated population, showing an increase of 0·33, as compared with that for the year 1913, and of 0·22 as compared with the average rate for the ten years, 1904-1913. The birth-rate was 22·6 per 1,000 of the estimated population, being 0·2 under that for the preceding year, and 0·7 under the average rate for the ten years, 1904-1913 ; and the death-rate (16·3 per 1,000), was 0·8 below the rate for the preceding year, and also 0·8 below the average rate for the ten years, 1904-1913.

TABLE I.—Showing for each of the years 1904–1914 the estimated **Population*** ; the number of **Marriages Births,** and **Deaths** registered, and the number of **Emigrants** (Natives of Ireland) enumerated, with the rates per 1,000 of the estimated Population represented thereby ; and the averages for the ten years, 1904–1913.

* See page 150.

The Diagram facing this page gives the respective rates per 1,000 of the population represented by the Marriages, Births, and Deaths registered in Ireland in each of the twenty years 1895-1914, and by the number of Emigrants enumerated in each of these years.

The number of Local Registration Officers holding office directly under the Department, or who have entered into bonds with the Registrar-General for the due discharge of their duties is 2,696. The cases of vacancies or appointments which were dealt with during the year 1914, number 656.

The following table shows the number of Searches made and Certificates issued at the General Register Office (exclusive of 2,053 Searches made and 799 Certificates issued for official purposes other than War Services, and exclusive also of 1,641 Marriage and 3,554 Birth-Searches made free of charge for Navy and Army Record Departments and Soldiers and Sailors Families Association to facilitate the Pay Departments in the allotment of separation allowances to wives and families of Sailors and Soldiers serving with the forces of the Crown); also the amount received as fees in each year, since the passing of the Acts for the Registration of Births and Deaths and of Roman Catholic Marriages in 1864.

TABLE II.—NUMBER OF SEARCHES made; number of CERTIFICATES issued, and Amount received as FEES for SEARCHES, &c., at the GENERAL REGISTER OFFICE, DUBLIN, during the 51 years 1864–1914.

Offences coming within the scope of the Acts administered by this Department reported during the financial year ended 31st March last, numbered 736. On careful inquiry into the circumstances, prosecutions were ordered to be instituted in 13 cases.

In 11 of these the parties were convicted and punished; one case was dismissed; and in the remaining one the proceedings were abandoned, the parties complying with the law.

Amongst the offences dealt with, the following are included:—Neglect to register births; neglect to register deaths; neglect to furnish Certificate of Marriage; giving false information when registering births and deaths; neglect of Coroner to furnish Certificate of the Finding of the Jury.

A sum of £90 was provided in the estimates to meet legal charges. During the year the total cost of the legal service of the Department was £38 8*s.* 6*d.*, of which sum £16 9*s.* 0*d.* was paid for local professional assistance, and £15 17*s.* 0*d.* for mileage and allowances to the Registrars, the balance of the expenditure being mainly in respect of Court costs.

MARRIAGES.

The Marriages registered during the year numbered 23,695, being equivalent to a rate of 5·41 per 1,000 of the estimated population*; this rate is 0·33 above that for the previous year, and 0·22 above the average for the ten years, 1904-1913.

Of the 23,695 Marriages registered during last year, 17,014 were of Roman Catholics, showing an increase of 1,276 as compared with the number recorded in 1913; 3,601 were celebrated according to the rites and ceremonies of the Church of Ireland—an increase of 154 as compared with the previous year; 2,252 as compared with 2,279 in 1913, were in Presbyterian Meeting-houses; 428, as against 452 in 1913, in "Registered Buildings" belonging to various religious denominations; 377 by civil contract in the Registrars' offices—an increase of 46 on the previous year; 7 were according to the usuages of the Society of Friends—a decline of one in comparison with 1913; and 16, as compared with 11 in 1913, according to the Jewish rites.

The marriages of Roman Catholics are equivalent to a rate of 5·25 per 1,000 of the Roman Catholic population estimated to the middle of 1914, or 0·30 above the corresponding average rate for the preceding ten years, and the other marriages are equivalent to a rate of 5·84 per 1,000 of all persons other than Roman Catholics in the population, this rate being 0·01 under the corresponding average rate for the ten years, 1904–1913.

Of the 3,601 Marriages celebrated according to the rites of the Church of Ireland, there were 57 by special licence, 2,994 by licence, 544 after the publication of banns and one by Registrar's Certificate; in 5 instances no information was afforded as to which of these methods was adopted.

---

* The rates for the total of Ireland and for the county boroughs of Dublin and Belfast are based on the estimated population in the middle of the respective years, those for the provinces and counties on the population according to the Census of 1911.

TABLE IV.—**Marriages** registered in Ireland in 1914, and in each of the previous ten years, according to the **modes of celebration**; with the rate per 1,000 of the population represented:—

The number of Licences for Marriages issued by the Registrars during the year 1914 in Registered Buildings and in the Registrars' Offices was 693.

In the following summary the number of Marriage Licences issued by the Licensing Ministers of the several Presbyterian bodies is given.

Presbytery or Synod.	Number of Licensing Ministers on 31st December, 1914.	Number of Registered Meeting-houses on 31st December, 1914.	Number of Licences issued.
1. General Assembly of the Presbyterian Church in Ireland,	160	587	1,924
2. Remonstrant Synod of Ulster, ...	10	20	29
3. Presbytery of Antrim, ...	4	11	22
4. United Presbytery or Synod of Munster, ...	2	2	2
5. Presbytery of Ireland (United Free Church of Scotland), ...	5	9	21
Total, ...	181	629	1,998

In Ireland, there being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics, a registration of the churches and chapels of the Roman Catholic Church is not necessary. With reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may be lawfully solemnized otherwise than by special licence. On the 31st December, 1914, there were 1,483 churches and chapels of the Church of Ireland, 629 registered Presbyterian Meeting-houses, and 431 "Registered Buildings" belonging to various religious denominations.

The number of "Registered Buildings" belonging to the several religious bodies, as revised for the year 1914, is shown in the following list:—

Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.
Methodists, ...	266	Salvation Army, ...	9	"Undenominational," ...	2
Reformed Presbyterians, ...	39	Seceders, ...	8	Jews, ...	1
Baptists, ...	32	"The Catholic Apostolic Church,"	2	"Holiness Movement" Church	1
Independents, or Congregationalists, ...	30	Non-Subscribing Unitarians,	1	Total, ...	431
Christian Brethren ...	29	Non-Subscribing Christians,	1		
Moravians, or United Brethren,	9	Welsh Presbyterians, ...	1		

During the year 1914, of the 23,695 marriages registered, 6,902 were recorded in the first quarter, 5,580 in the second, 5,617 in the third, and 5,596 in the fourth quarter.

Calculations based on the figures given in the Abstract of Marriages, commencing on page 40, show that the marriages of bachelors with spinsters constituted 89·7 per cent. of the total; that those of widowers and spinsters were 6·3 per cent.; that the marriages of bachelors and widows were 2·4 per cent.; and that those of widowers and widows formed 1·6 per cent. of the total marriages. Thus of the men married, 7·9 per cent. were widowers, and of the women, 4·0 per cent. were widows, so that, in 12 instances, in every 100 marriages, one or both of the contracting parties had been in the married state before.

TABLE V.—Showing, by QUARTERLY PERIODS, the number of MARRIAGES registered in Ireland in each of the eleven years 1904–1914, and the average number for the ten years 1904–1913, distinguishing the number of Roman Catholic Marriages registered under the 26 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81.

The entry of "minor" or "full age," as the case may be in the age column of Marriage Registers or Certificates, satisfies the requirements of the law so far as the ages of the contracting parties are concerned. This circumstance, which is taken advantage of in a great many instances in Ireland, is very regrettable, as a complete record of the ages of the persons married would be valuable from many points of view. In the year 1865, out of 30,802 marriages registered in Ireland, the ages of both parties were given in 13,910 cases, being equal to 45·2 per cent. of the total marriages in that year, while in the year 1908 such cases fell to 3,454, or only 15·2 per cent. of the total marriages recorded during 1908. The proportion of cases in which the information regarding the age of both parties was stated, rose to 21·2 per cent. in 1909, to 21·7 per cent. in 1910, and to 22·7 per cent. in 1911, falling slightly to 22·6 per cent. in 1912, but again rising to 22·9 per cent. in 1913. Thus it will be seen that the percentage, which decreased from 1865 to 1908, showed some improvement from 1909 to 1913; but during 1914 the rate has again declined to 22·6, the actual number of instances in which both parties furnished their ages during the latter year being 5,360*. Of those married in England and Wales during the year 1913, 99·4 per cent. of husbands and wives made definite statements of age at time of marriage.

During the year, 387, or 1·63 per cent., of the men married were under age; and of the women married 1,479, or 6·24 per cent., were minors.

The proportion of husbands who married under age in 1914 was highest in the province of Leinster, namely, 2·11 per cent., Ulster contributing the highest proportion of wives (8·19 per cent.).

It may be stated that in Ireland the percentage of persons married who were under age is very far below the corresponding percentages in England and Scotland.

---

* Not including 1,079 instances in which the age at marriage was stated by only one of the contracting parties, viz., 437 men and 642 women.

Evidence of the progress of elementary education in Ireland is afforded by the signatures of the contracting parties in the marriage registers or certificates. In the year 1914, there were 22,405, or 94·6 per cent., of the husbands, and 22,845, or 96·4 per cent., of the wives, who wrote their names, and the remainder signed by "mark," as against 20,584, or 89·6 per cent., of the husbands, and 21,122, or 92·0 per cent., of the wives, in the year 1904; and 17,912, or 82·9 per cent., of the husbands, and 18,039, or 83·5 per cent., of the wives, in the year 1894. The improvement is still more marked in previous decades, the percentage of persons who wrote their names being but 61·4 in the case of the husbands and 49·7 in the case of the wives in the year 1864; the rates in 1874, were 69·9 and 63·6 respectively; and in 1884, 75·3 and 71·9 respectively.

During the year 1914, 96 per cent. of the men married in the provinces of Leinster and Munster wrote their names, 94 per cent. in Ulster, and 91 per cent. in Connaught; and, among women, the percentages were as follows:—Leinster, 97; Munster, 97; Connaught, 96; and Ulster, 96.

In 264 cases both of the persons married signed the register by "mark" and the register was thus signed by either the husband or the wife in 1,612 cases, so that in 1,876 cases, or 7·9 per cent. of the total number of marriages, one or both of the parties attested the signature by "mark"; and in 21,819 marriages or 92·1 per cent., *both* parties wrote their names.

The following table gives for Ireland, and for each of the four provinces, the proportion per cent. of persons married in each of the eleven years 1904-1914, who wrote their names in the registers or certificates; of minors; of widowers; and of widows:—

TABLE VI.—Showing, as regards the **Marriages** in Ireland, and in each of the Four Provinces, during the years 1904–1914, the proportion per cent. of Persons who **signed their names,** of Persons **not of Full Age,** and of **Re-marriages.**

	1913,	91·2	96·0	0·55	3·74	7·15	2·90
	1914,	91·3	95·6	0·57	2·88	6·94	3·34

In the provinces of Leinster and Ulster, during the year 1914, the marriage rate was highest, namely, 5·8 per 1,000 of the population, according to the Census of 1911. The rate in Munster was 5·1 per 1,000; and in Connaught 4·3 per 1,000.

The highest marriage rate for county, or county borough areas, was 7·9 per 1,000 of the population for each of the county boroughs of Dublin and Belfast, and the lowest was 4·1 per 1,000 for each of Waterford county and county borough, Galway county and Roscommon county. Between these extremes the highest rates were 6·0 for Dublin county, 5·6 for Tipperary N.R., and 5·3 for Cork county and county borough; and the lowest were 4·2 for Kildare county, and 4·4 for each of Queen's, Fermanagh and Mayo counties.

BIRTHS.

The number of births registered during the year 1914 amounted to 98,806—50,659 boys and 48,147 girls, or 105·2 of the former to every 100 of the latter—the ratio to the estimated population being 1 in 44·3, or 22·6 per 1,000, which is 0·7 below the average rate per 1,000 for the ten years, 1904-1913.

Of the 98,806 births registered in Ireland during the year, 95,863, or 97·0 per cent., were legitimate, and 2,943, or 3·0 per cent. were illegitimate, the latter being 0·3 above the corresponding average percentage for the preceding ten years. As regards illegitimacy Ireland compares favourably with most other countries.

The male children born in wedlock numbered 49,141, and the female 46,722, or 105·2 of the former to every 100 of the latter; of the illegitimate children, 1,518 were males, and 1,425 females, being 106·5 boys to 100 girls.

From Table VII. it appears that of the children born in Ulster, 4·0 per cent. were illegitimate; in Leinster, the percentage was 3·2; in Munster, 2·4; and in Connaught, 0·7.

TABLE VII.—Showing the Percentage of **Legitimate** and of **Illegitimate** Births registered in Ireland during the years 1910–1914 by Provinces.

Provinces.	Proportion per cent. of Legitimate Births.					Proportion per cent. of Illegitimate Births.

In the provinces the rates represented by the total births registered during the year 1914 were as follows:—Leinster, 22·9 per 1,000 of the population in 1911; Munster, 21·7; Ulster, 23·2; and Connaught, 21·4.

The county or county borough areas which had the highest birth-rates, were—Dublin county borough, 30·1; Belfast county borough, 28·8; Limerick county and county borough, 24·3; Mayo county, 23·1; Londonderry county and county borough, 23·0; and Kerry county, 22·6. The counties having the lowest rates were—Dublin county, 17·5; Roscommon, 19·5; Tipperary N.R., 19·6; Carlow, 19·7; Wicklow, 19·9; and Leitrim, 19·9.

Of the total births, 51·7 per cent. were registered in the first six months of the year (181 days), and 48·3 per cent. in the second six months of the year (184 days).

The total number of births registered in the first quarter of the year was 24,999; in the second, 26,103; in the third, 24,296; and in the fourth, 23,408.

In the following table particulars are supplied concerning Multiple Births in Ireland for a period of 7 years.

MULTIPLE BIRTHS IN IRELAND IN EACH OF THE YEARS 1908–1914.

Year.	Total Births.	Twin Births.	Triplets.	Quadruplets.	Twin Births—per cent. of		
					Total Births.	Single Births.	Total Mothers.

1909	102,759	1,201	17	–	1·169	1·197	1·183
1910	101,963	1,128	13	–	1·106	1·132	1·119
1911	101,758	1,266	10	–	1·244	1·276	1·260
1912	101,035	1,262	6	–	1·249	1·281	1·265
1913	100,094	1,272	7	–	1·271	1·304	1·287
1914	98,806	1,273	11	–	1·288	1·323	1·305

From the above it will be seen that during the year 1914, there were registered 1,273 twin births, and 11 triplets; and that the twin-births were 1·288 per cent. of the total births, 1·323 per cent. of the single births, and 1·305 per cent. of the total mothers.

DEATHS.

There were 71,345 deaths registered in Ireland during the year 1914, equivalent to 1 in 61·4, or 16·3 per 1,000 of the population estimated to the middle of the year. The deaths of males amounted to 35,812, and those of females to 35,533, the rate for males being 16·4 per 1,000, and for females 16·2 per 1,000.

The death-rate (16·3) is 0·8 below that for the year 1913, and also 0·8 below the average rate for the ten years, 1904–1913.

As in previous years, many of the Registrars have supplied useful notes in their Quarterly Returns relating to the sanitary condition of their respective districts. These notes were published in the Quarterly Reports issued from this Department, and it is desirable that they should receive the careful attention of the various Local Authorities entrusted with the administration of the Public Health Acts.

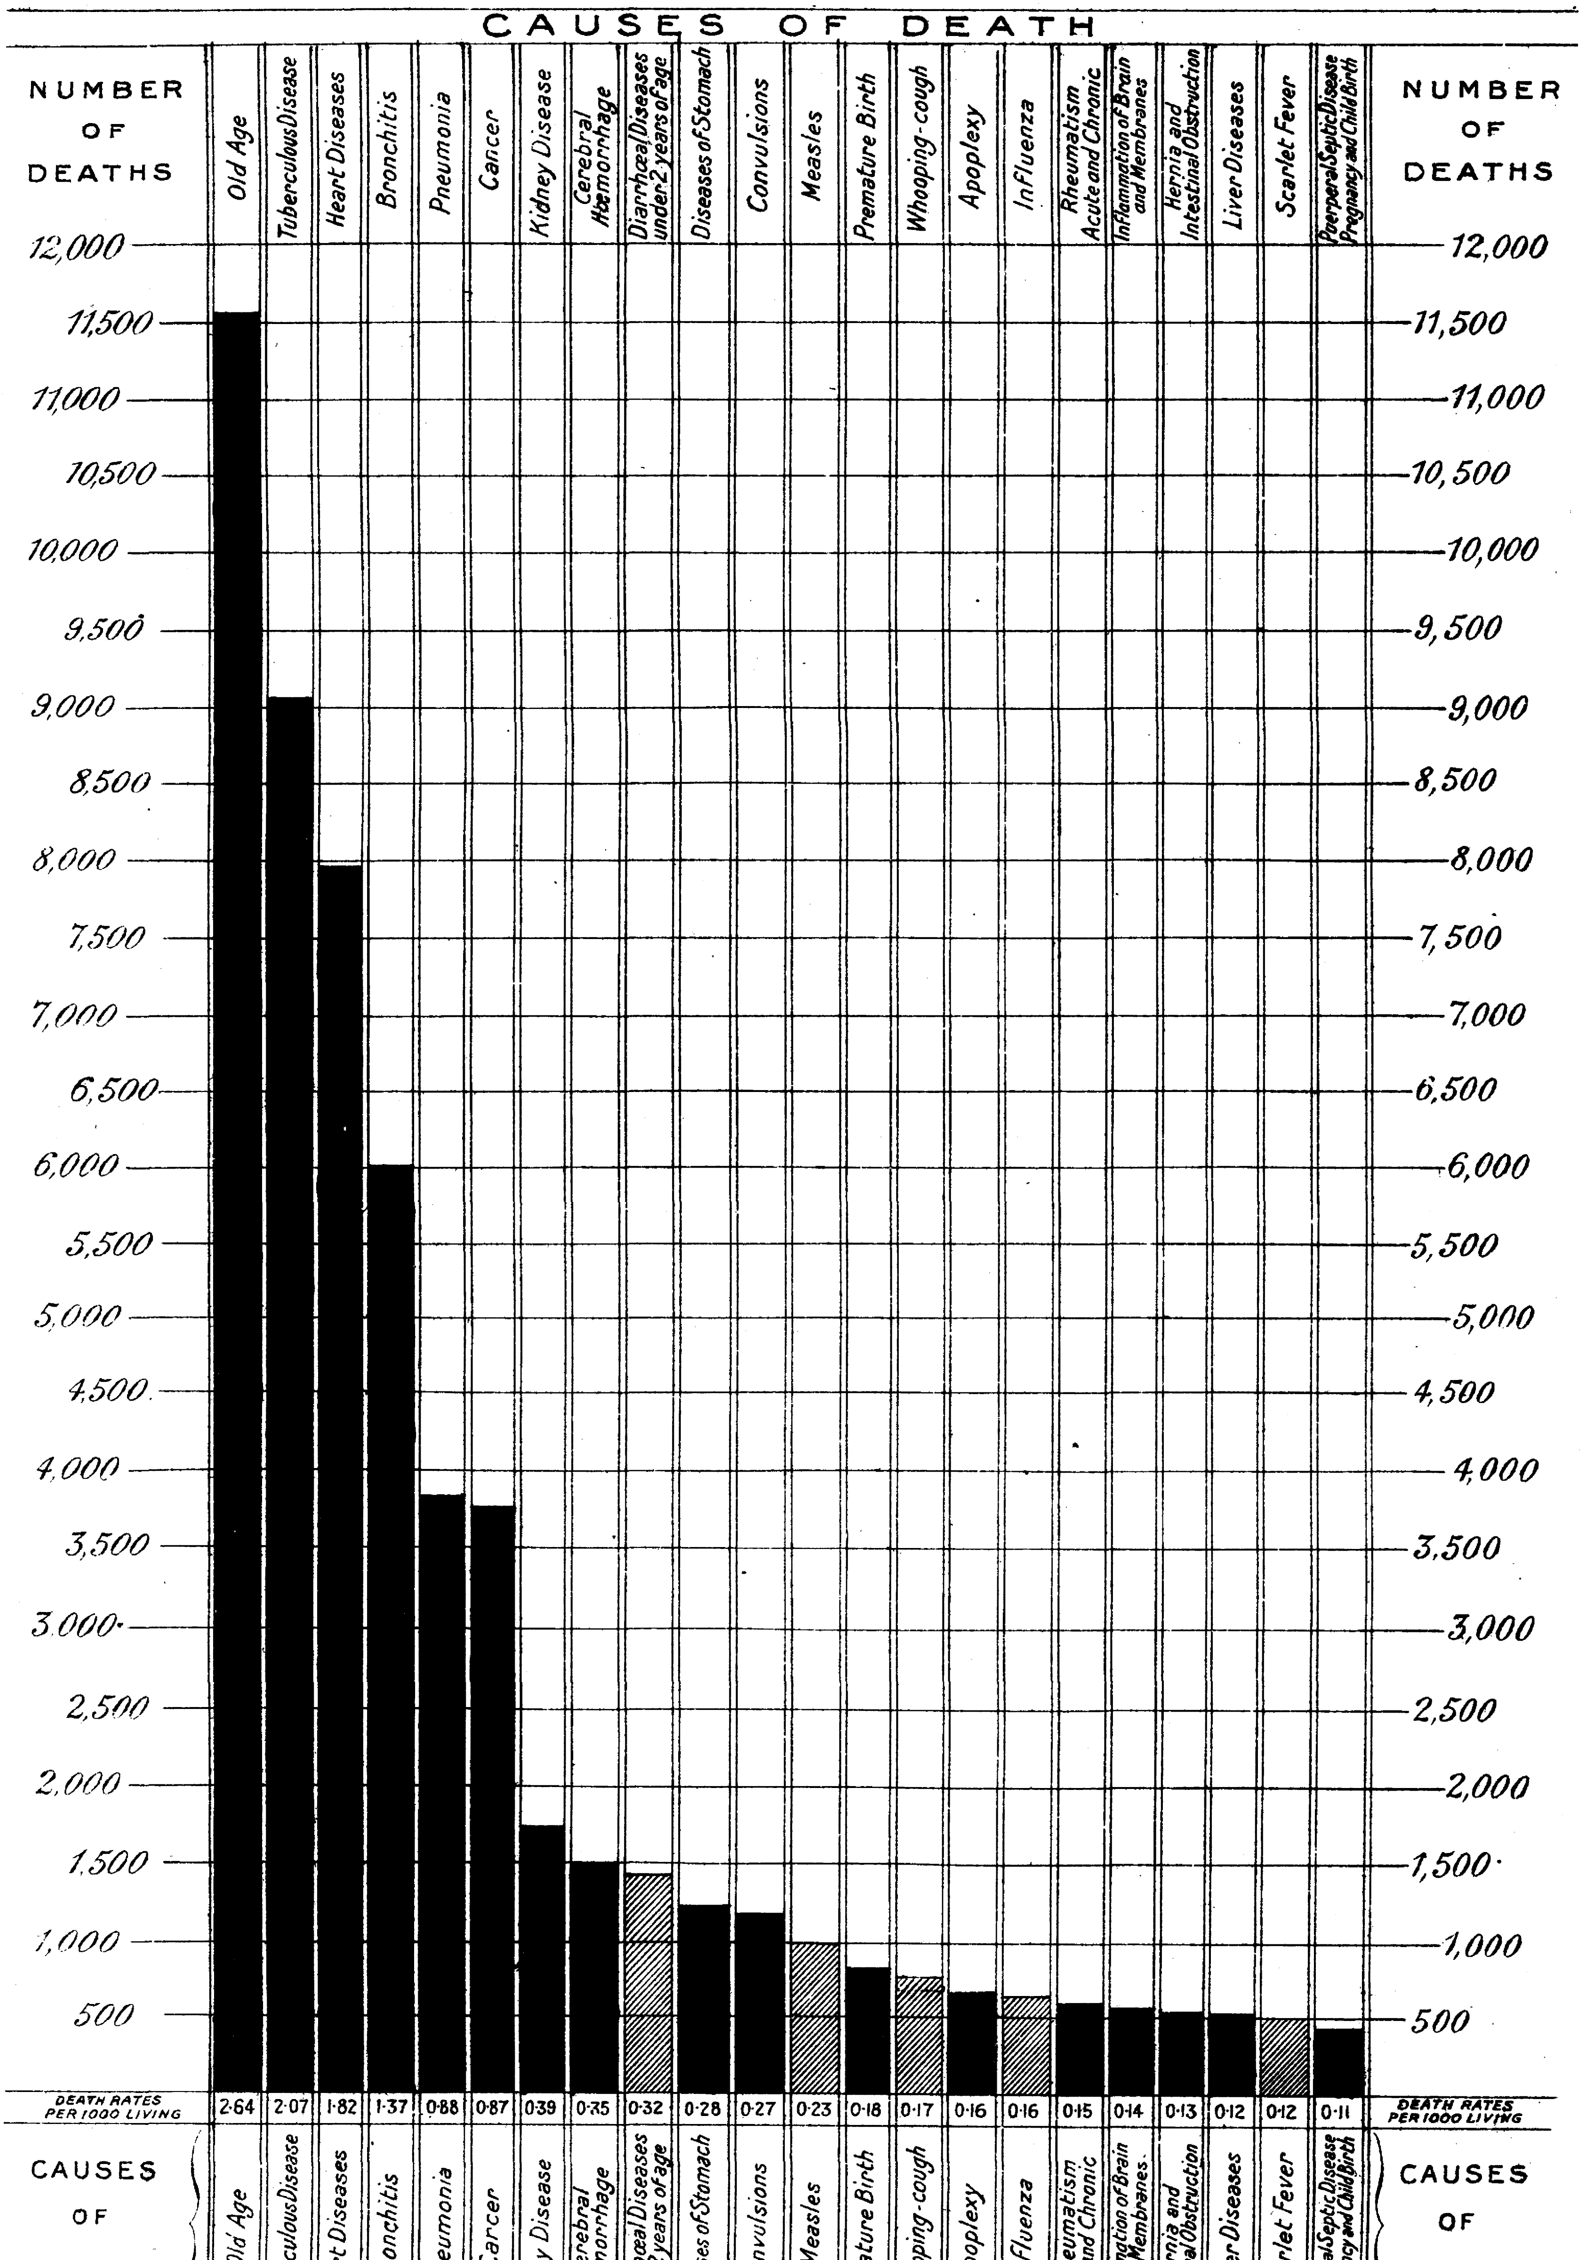
For the provinces the recorded death-rates are as follows:—Connaught, 13·6; Munster, 15·4; Ulster, 16·8; and Leinster, 17·7 per 1,000 of the population, according to the Census of 1911.

The counties having the lowest mortality rates per 1,000 of the population are:—Mayo county, 12·8; Kerry 12·8; Roscommon 13·2; and Clare, 13·2.

The counties or county boroughs with the highest rates are as follows:—Dublin county borough, 23·7; Belfast county borough, 18·3; Limerick county and county borough, 17·5; and Monaghan, 17·5.

The deaths registered in the first half of the year, as observed in previous reports, generally out-number those registered in the second half, the deaths registered in the six months of 1914, January to June inclusive, being equivalent to 54·4 per cent. of the total for the year, and those in the remaining six months to 45·6 per cent.

DIAGRAM No. 2.—Mortality from Twenty-two of the Principal Causes of Death in Ireland, in the year 1914.



The annual rates represented by the deaths registered in each quarter are as follows:—18·6 per 1,000 of the population for the first quarter; 16·8 for the second; 13·9 for the third; and 15·8 for the fourth. The rate for the first quarter is 1·5 below, the second 1·2 below, the third 0·5 below, and the fourth 0·2 below the average rate for the corresponding quarters in the ten years, 1904-1913.

As will be observed from the table on pp. 140-141, *of the* 71,345 *deaths registered during the year,* 4,061 *took place in Infirmaries and General and Special Hospitals;* 1,507 *in Public Lunatic Asylums;* 9,767 *in Workhouses and Workhouse Hospitals; and* 56,010 *were of persons who died "At their Own Homes, &c."*

Of the total deaths registered in Ireland, 5·7 per cent. occurred in "Infirmaries and General and Special Hospitals," the percentages for the four provinces varying from 0·7 in Connaught to 11·7 in Leinster. Deaths which took place in the Workhouses or Workhouse Hospitals constituted 13·7 per cent. of the total deaths, the respective percentages of these deaths for the provinces being—Leinster, 16·0; Munster, 18·7; Ulster, 10·1; and Connaught, 10·0.

TABLE VIII.—Showing by QUARTERLY PERIODS, the number of BIRTHS and DEATHS registered in Ireland in each of the eleven years, 1904–1914, and the average number for the ten years, 1904–1913.

CAUSES OF DEATH.

The deaths in Ireland registered during the year 1914, are shown by causes (classified as in the three preceding years in accordance with the International List of Causes of Death) and by ages and sexes in the abstracts commencing at page 120. These abstracts are concerned with the deaths in the country as a whole, as well as those occurring in the provinces, counties, and unions.

The mortality from some of the principal causes of death in 1914, as compared with preceding years is given in the following statement.

STATEMENT showing the number of deaths from the undermentioned causes registered in Ireland during each of the years 1913 and 1914, with the annual average number for the ten years, 1904-1913.

CAUSES.	NUMBER OF DEATHS REGISTERED.			CAUSES.	NUMBER OF DEATHS REGISTERED.		
	Years.		Average 10 years, 1904–1913.		Years.		Average 10 years, 1904–1913.

Influenza, ...	696	1,174	1,272	Accidents of Pregnancy and Childbirth.	283	334	346

It would appear from the foregoing statement that in comparison with the year 1913, there is a decrease of 568 in the number of deaths from diarrhœa and enteritis of children under 2 years of age, a decrease of 567 in the deaths from bronchitis, of 478 from influenza, of 298 from tuberculous disease, of 102 from pneumonia, of 93 from cancer, of 51 from accidents of pregnancy and childbirth, of 3 from typhus, and 2 from enteric fever. No change took place in the mortality from cerebro-spinal fever. On the other hand deaths from scarlet fever in 1914 show an increase of 149 over those recorded in 1913, deaths from whooping-cough an increase of 133, from measles an increase of 83, from puerperal septic diseases 21, and from diphtheria 14.

The following diagrams and maps have been prepared to illustrate the leading features of Irish mortality during the year 1914.

DIAGRAM No. 1.—Showing the respective rates per 1,000 of the population represented by the Marriages, Births, and Deaths registered in Ireland in each of the twenty years, 1895–1914, and by the number of Emigrants enumerated in the same years ... ... *Facing* Page v

ENTERIC FEVER.—Of 287 deaths from enteric fever registered during the year 1914, those of males numbered 157, and females 130. The 287 deaths are 2 under the number recorded during the preceding year, and 65 under the average for the ten years, 1904–1913, the annual number of deaths for that period varying from 502 for the year 1905 to 232 for the year 1912.

In Dublin South Union, during the year 1914, the number of deaths from enteric fever registered was 57; in Dublin North 10; in Ballymena 16; in Lisburn 15 (13 appertaining to Belfast county borough); in Carrick-on-Suir 14; in Cork 12; and in Belfast 10. In these seven unions 134 deaths were registered, or 47 per cent. of the total deaths from enteric fever in Ireland.

TABLE XI.—Showing, for the year 1914, the number of deaths from the several forms of **Fever** at each Age-Period, with the proportion to the number of the living at each Age represented thereby.

TYPHUS.—Deaths from this cause numbered 45 (22 of males and 23 of females). This number is 3 below that recorded in the preceding year, and 10 under the average (55) for the decennium, 1904–13.

Of the 45 deaths, 9 occurred in the union of Lisburn (8 belonging to Belfast county borough); 7 in Belfast union; 5 in Ballina; 4 in Galway; 2 each in Cahersiveen, Castleblayney, Cork, Dingle, and Dublin South; and one death each in Drogheda, Ennis, Kilrush, Limerick, Londonderry, Newry, Portumna, Scarriff, Strokestown and Westport unions.

[TABLE

The following TABLE (IX.) shows (1) the Number of Deaths from All Causes; from some during each of the eleven years, 1904–1914, with the Average Annual Number for the represented by the number of deaths from these causes, and the percentage of

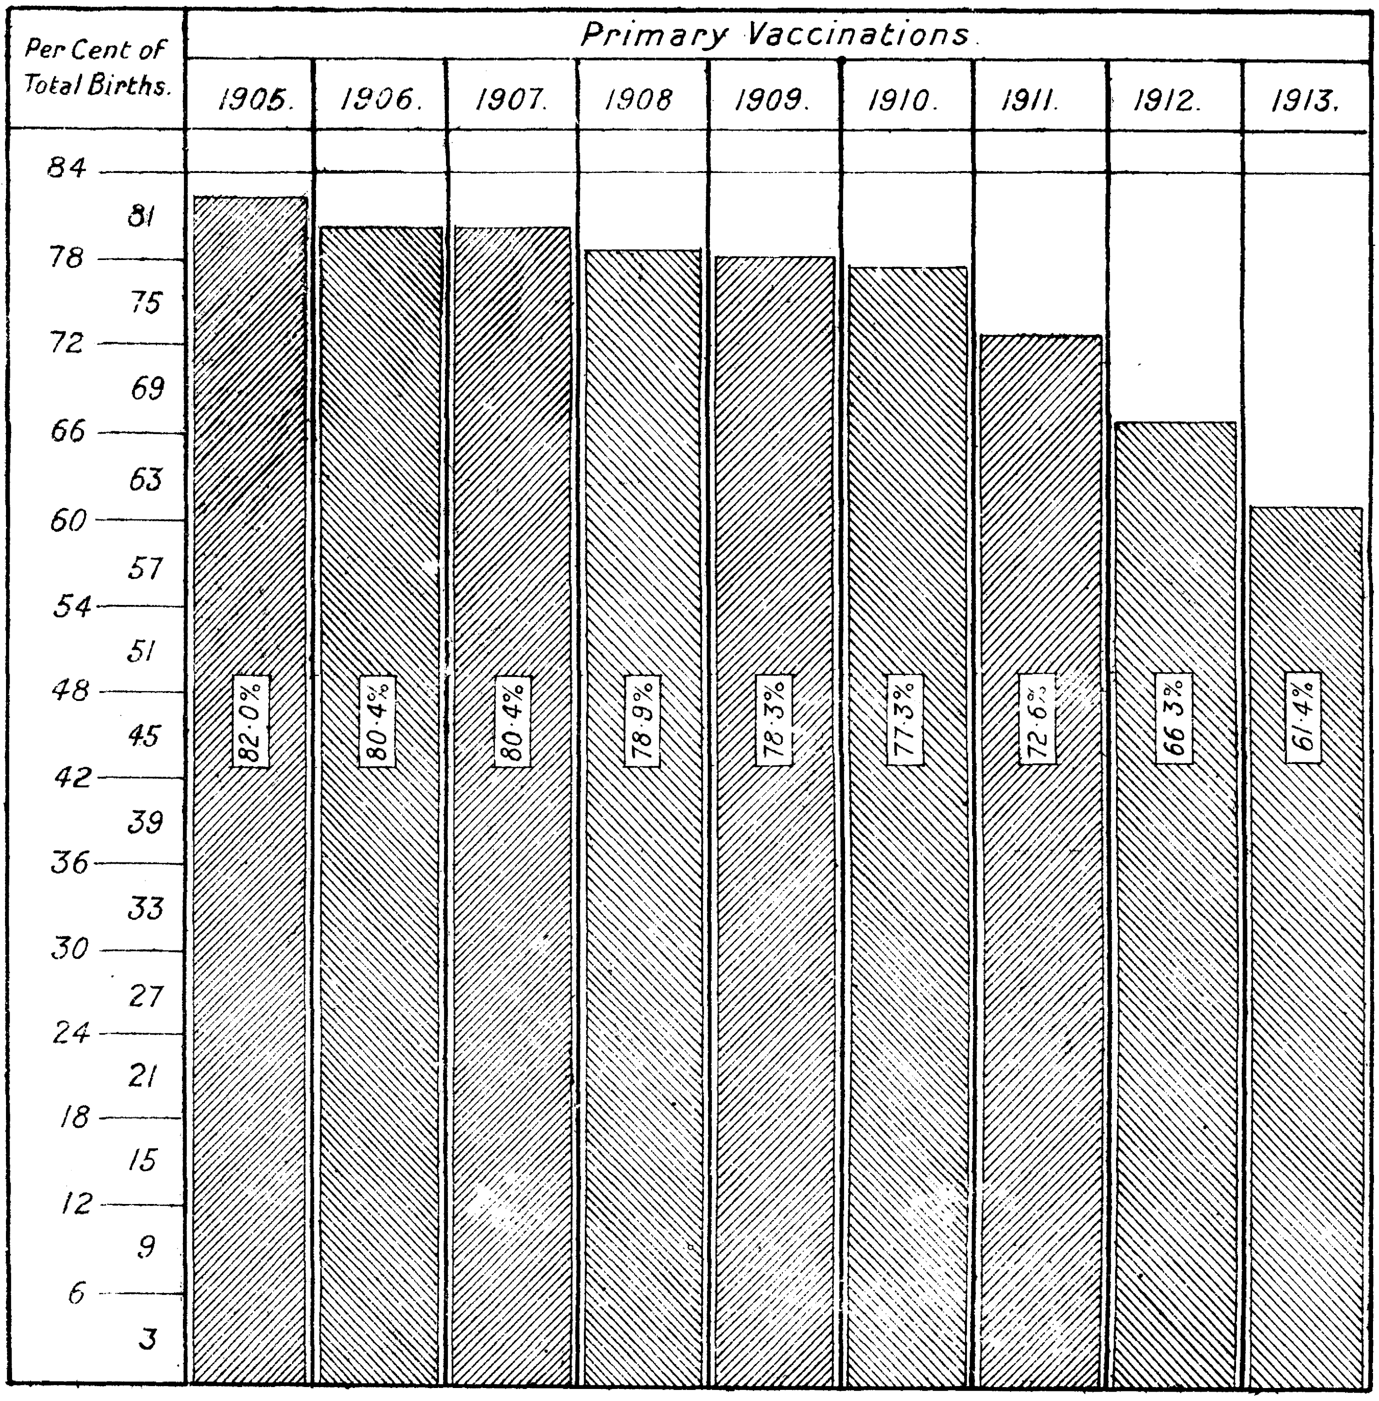
* The rates for the years 1905-1909 are based on the Census population of 1901; those for the remaining years on the population according to the Census of 1911.

DIAGRAM No. 3.—Showing the number of Successful Primary Vaccinations to every 100 Births registered in Ireland during each of the 9 years, 1905-1913.



6080.)Wt.P. — .3.12.875.7/15.A.T.&Co.,Ltd.

To face page XIX.

The following table gives the deaths from typhus registered in Ireland since the year 1869.

TABLE showing the number of Deaths from Typhus registered in Ireland during each of the years 1869–1914.

YEAR.	No. of Deaths from Typhus.	YEAR.	No. of Deaths from Typhus.	YEAR.	No. of Deaths from Typhus.
1869, ...	891	1885, ...	505	1901, ...	92
1870, ...	745	1886, ...	394	1902, ...	83
1871, ...	873	1887, ...	405	1903, ...	77
1872, ...	702	1888, ...	362	1904, ...	53
1873, ...	691	1889, ...	359	1905, ...	68
1874, ...	756	1890, ...	391	1906, ...	86
1875, ...	694	1891, ...	266	1907, ...	56
1876, ...	619	1892, ...	268	1908, ...	59
1877, ...	724	1893, ...	227	1909, ...	43
1878, ...	749	1894, ...	233	1910, ...	63
1879, ...	753	1895, ...	192	1911, ...	37
1880, ..	934	1896, ...	129	1912, ...	34
1881, ...	859	1897, ...	121	1913, ...	48
1882, ...	744	1898, ...	223	1914, ...	45
1883, ...	810	1899 ...	117		
1884, ...	628	1900, ...	128		

The principal feature in connection with the above table is the great reduction in the mortality of the later as compared with the earlier years. After making due allowance for the variation in the population, it is found that the average for the first five years covered by the table is 14 times higher than the average (45) for the last quinquennial period, the number of deaths having fallen in 1912 to 34, being the lowest annual number of deaths from typhus recorded in Ireland.

SMALL-POX.—During the year no report regarding the presence of small-pox reached the General Register Office.

DECLINE IN VACCINATION.

In the following table particulars are given with respect to the Vaccination of the Children whose Births were registered in Ireland during each of the years 1904-1913, with their percentage to the total Births registered during each year :—

Years.	Successful Vaccinations (Form A. First Schedule).		Vaccinations Postponed (Form B, first Schedule).		Insusceptible of Vaccine Disease (Schedule D).				Died before Vaccination.		Unaccounted for, owing to removal from District or otherwise.		Defaulters who have not been granted an extension of time under Form B, First Schedule.		Total Births Registered.	
					On the ground of constitutional insusceptibility of the Vaccine Disease.		In respect of the children having already had Small-pox.									
	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.
1904	84,068	81·0	2,184	2·1	118	0·1	2	0·0	7,105	6·9	3,774	3·6	6,560	6·3	103,811	100·0
1905	84,326	82·0	2,505	2·4	90	0·1	.	.	6,624	6·5	3,625	3·5	5,662	5·5	102,832	100·0
1906	83,223	80·4	2,555	2·5	121	0·1	.	.	6,955	6·7	4,229	4·1	6,453	6·2	103,536	100·0
1907	81,841	80·4	2,360	2·3	88	0·1	.	.	6,656	6·6	3,567	3·5	7,230	7·1	101,742	100·0
1908	80,504	78·9	2,601	2·5	96	0·1	.	.	6,808	6·7	3,217	3·2	8,813	8·6	102,039	100·0
1909	80,455	78 3	2,715	2·6	118	0 1	.	.	6,651	6·5	3,884	3·8	8,936	8·7	102,759	100·0
1910	78,839	77·3	2,754	2·7	83	0·1	.	.	6,680	6·6	3,694	3·6	9,913	9·7	101,963	100·0
1911	73,856	72·6	2.990	2·9	151	0·2	.	.	6,434	6·3	4.518	4.4	13,809	13·6	101,758	100·0
1912	66,934	66·3	3,375	3·3	91	0·1	.	.	5.778	5·7	3,143	3·1	21,714	21·5	101,035	100·0
1913	61,551	61·4	3,111	3·1	71	0·1	.	.	6,082	6·1	3.480	3·5	25,799	25·8	100,094	100·0

It will be seen from the above statement that from the year 1907, 80·2 per cent. of the children born in that year having been successfully vaccinated, there has been from year to year a steady decline to 61·4 per cent. in 1913, the latest year regarding which vaccination particulars have been obtained.

These facts are graphically shown in Diagram No. 3 facing this page.

The following table gives the number of deaths from small-pox, and the number of primary vaccinations reported by the Registrars in their quarterly returns for each of the years 1882–1914.

Year.	Number of Deaths registered from Small-pox.	Number of successful Primary Vaccinations in each year.	Year.	Number of Deaths registered from Small-pox.	Number of successful Primary Vaccinations in each year.	Year.	Number of Deaths registered from Small-pox.	Number of successful Primary Vaccinations in each year.
1882	129	107,613	1893	1	88,695	1904	6	91,976
1883	16	106,961	1894	72	107,204	1905	5	89,394
1884	1	105,021	1895	146	92,227	1906	-	90,171
1885	4	102,680	1896	4	88,817	1907	1	89,207
1886	2	97,137	1897	3	89,732	1908	-	88,576
1887	14	96,866	1898	-	87,169	1909	-	86,799
1888	3	93,520	1899	1	84,937	1910	-	88,698
1889	-	92,621	1900	1	91,150	1911	-	84,011
1890	-	93,368	1901	2	88,520	1912	-	77,374
1891	7	92,267	1902	1	94,303	1913	-	67,907
1892	-	89,527	1903	40	95,955	1914	-	67,348

It appears that no death from small-pox has been recorded in Ireland during the 7 years ending with 1914.

The following particulars should be ascertained regarding all persons suffering from small-pox :—

1. *If there is no evidence of vaccination.*
2. *If vaccinated in infancy only—number of scars.*
3. *If vaccination is performed only after infection by small-pox.*
4. *If stated to be vaccinated, but no scars visible.*
5. *If re-vaccinated, the date of re-vaccination, if possible.*

MEASLES.—Deaths from measles which in 1911 numbered 431 (the lowest number but one for any year of the decade ending with 1913) rose to 813 in 1912, and to 920 in 1913, further rose to 1,003 in 1914. This is the highest number of deaths from measles recorded for any year since 1902, during which 1,076 deaths were registered. In the decennium, 1904-13, the number of deaths from this cause varied from 388 in 1906 to 920 in 1913. Of the 1,003 deaths in 1914, representing a rate of 0·23 per 1,000 of the estimated population, 499 were those of males and 504 of females, 425 of the former and 427 of the latter being deaths of children under 5 years of age.

In Belfast union 214 deaths were registered, this number affording a rate of 0·52 per 1,000 of the population ; in Dublin North 210 deaths, and in Dublin South 187 deaths were recorded, the total for the two unions (397) being equivalent to 0·98 per 1,000 ; Armagh 44 (or 1·00 per 1,000) ; Sligo 33 (or 0·91 per 1,000) ; Lisburn 21 (or 0·45 per 1,000) ; Castleblayney 20 (or 0·80 per 1,000) ; Ballina 18 (or 0·76 per 1,000) ; Cork 17 (or 0·13 per 1,000) ; Nenagh 15 (or 0·65 per 1,000) ; Longford 14 (or 0·66 per 1,000) ; Lurgan 12 (or 0·22 per 1,000) ; Navan 11 (or 0·77 per 1,000), and Roscrea 10, equal to a rate of 0·59 per 1,000 of the population.

The fourteen unions here mentioned, in each of which 10 deaths or more were registered, contributed 826 deaths from measles, or over 82 per cent. of the total deaths from this malady, the aggregate population of the unions referred to constituting only 28 per cent. of the inhabitants of Ireland.

SCARLET FEVER.—The deaths from this cause, which amounted to 72 (the lowest number on record) in 1908, rose to 129 in 1909, to 173 in 1910, to 293 in 1911, to 308 in 1912, and to 358 in 1913, further rose to 507 in 1914. It will thus be seen that there was a continuous increase in the mortality from scarlet fever between 1908 and 1914, the largest increase, viz., 149, occurring in 1914 as compared with the previous year. The number registered during the year 1914 is also the highest number recorded since the year 1897, during which 522 deaths were registered.

Of the 507 deaths, affording a rate of 0·12 per 1,000 of the population, 248 were those of males and 259 of females, 150 (or 60 per cent.) of the males and 125 (or 48 per cent.) of the females being deaths of children under 5 years of age.

The majority of the deaths relate to the larger urban areas, 107 being registered in Lisburn union (95 of these belonging to Belfast), 81 in Belfast, 37 in Waterford, 35 in Dublin South, 14 in Limerick, 12 each in Banbridge, Newry and Newtownards, 11 in Lurgan and 10 in Cork.

In these ten unions 331 deaths from scarlet fever were registered, or 65 per cent. of the total for the whole country.

WHOOPING-COUGH.—The deaths allocated to whooping-cough number 751, affording an annual rate of 0·17 per 1,000 of the estimated population. This number is 133 above that registered during the year 1913, but 225 under the average for the decennium, 1904–1913. Of the 347 deaths of males in the year 1914, 328 were those of children under 5 years of age, and of the 404 females whose deaths were registered during the same period, 372 were those of children at that age.

In Belfast union 238 deaths were recorded ; in Cork, 82 ; in Dublin South, 33 ; in Dublin North, 30 ; in Enniscorthy, 28 ; in Castlebar, 27 ; in Claremorris, 19 ; in Boyle, Castlereagh, and Tralee unions, 17 deaths each ; in Newtownards, 15 ; in Tuam, 14 ; in Dingle and Lisburn unions, 12 deaths each ; in Oughterard, 11 ; and in Ballina, 10.

DIPHTHERIA.—Although 14 in excess of those recorded in the preceding year, the fatal cases of diphtheria (323) during the year 1914 are 17 under the average (340) for the ten years ending with 1913. During the latter period, the deaths from this cause ranged from 395 in 1909 to 283 in 1907 ; they numbered 342 in 1910, 381 in 1911, 351 in 1912 and 309 in 1913.

The deaths of 167 males from diphtheria include 104 (or 62 per cent.) of children under 5 years of age, and of the 156 deaths of females 80 or slightly over one-half were those of children at the same age-period.

There were 58 deaths in Dublin South union, 19 in Dublin North, 28 (including 20 admitted to Purdysburn hospital from Belfast) in Lisburn union, 15 in Lurgan, 13 in Cork, 12 in Belfast, 12 in Kilkenny, 9 in Banbridge, 8 in Limavady, and 5 deaths each in Ballymoney, Carlow, Larne, Naas and Newry unions.

In the 14 unions above mentioned, in which 5 or more deaths occurred, 199 deaths, or 62 per cent. of the total mortality from diphtheria in Ireland, were registered.

The deaths finally assigned to membranous laryngitis, croup numbered 72 (42 of males and 30 of females). In these cases, they were either found, as the result of special inquiry, to be non-diphtheritic or further information was not obtainable. Deaths referred to this heading in 1913 amounted to 70.

INFLUENZA.—There were 696 deaths from this malady, representing a rate of 0·16 per 1,000 of the population. This number, comprising 335 deaths of males and 361 of females, is 478 less than that recorded in 1913, and 576 under the average for the ten years, 1904–1913. In fact the mortality in 1914 is the lowest recorded since 1889 during which year only 21 deaths were registered.

The number of deaths from influenza by ages and sexes for each county and province is given in Table XII. with the mortality per 10,000 of the population.

The province of Leinster is represented by a rate of 1·5 per 10,000 of the population ; Munster by 1·0, Ulster by 2·2, and Connaught by 1·1 per 10,000 of the population of the province.

The rates for the county areas ranged from 3·3 per 10,000 of the population for Londonderry county and county borough, 3·2 for Kilkenny, 3·2 for Tyrone, 3·0 for Wicklow, and 2·9 for Down county to 0·3 per 10,000 for Clare county, 0·3 for Kerry, 0·4 for Mayo, 0·6 for Dublin county borough, and 0·6 for Roscommon county.

TABLE XII.—Showing, by Provinces, Counties, &c., the number of Deaths registered in Ireland from Influenza at each of five Age-Periods during the year 1914, with the rate per 10,000 of the population* represented by the deaths at all ages.

* See note (*) on page vii.

Diarrhœa and Enteritis (deaths of children under 2 years).—To this heading 1,424 deaths were assigned, being 568 under the number registered during the year 1913, but slightly over the average (1,417) for the ten years 1904–13.

The 1,424 deaths are represented by a rate of 0·32 per 1,000 of the population, and include 444 in Belfast union, 229 deaths in Dublin South union, 161 in Dublin North, 84 in Cork, 37 in Waterford, 34 in Londonderry, and 14 in Limerick union. In these unions, which contain the six county boroughs of Ireland, 1,003 deaths from diarrhœa and enteritis of children under 2 years of age were registered, or more than 70 per cent. of the total of such deaths in the whole country.

Other Epidemic Diseases.—Under this designation, 10 deaths from mumps, 5 from German measles, and 5 from varicella were recorded, as against 6, 3, and 4, respectively, registered during the year 1913.

Syphilis.—The deaths of 116 persons were returned as from this cause, and of these 68 were males and 48 females. Forty-seven deaths of males and 42 of females were those of infants under one year old. In the year 1913, the total number of deaths from syphilis at all ages amounted to 87, the males numbering 58 and the females 29 ; and in the year 1912, the respective numbers were 99, 49 and 50.

During the year 1914, deaths from the following diseases were registered :—Thirty-one from locomotor ataxy (24 of males and 7 of females), 103 from general paralysis of the insane (88 of males and 15 of females) and 40 from aneurysm (31 of males and 9 of females).

Details as regards ages, &c., will be found in the abstracts commencing on page 120.

POLIOMYELITIS—INFANTILE PARALYSIS.

The following statement gives the deaths, by ages and sexes, returned as having been caused by the above condition during the year 1914.

—	All Ages	Under 1 year	1–	2–	3–	4–	5–10	10–15	15–20	20–25	25–35	35–45	45 and upwards.
Males ...	24	3	–	3	4	2	5	3	2	–	1	1	–
Females ..	23	–	1	1	3	–	6	4	3	3	1	–	1
Total ...	47	3	1	4	7	2	11	7	5	3	2	1	1

It would appear from the above statement that of the 24 deaths of males, 12 were those of children under 5 years of age, and the 23 deaths of females include 5 deaths of children under the age of 5 years.

In the year 1913, there were 20 deaths of males and 10 of females, the deaths of children under 5 years of age numbering 13 and 7 respectively.

Pneumonia.—To this cause 3,846 deaths were attributed, affording a rate of 0·88 per 1,000 of the population. Of the 3,846 deaths (2,256 of males and 1,590 of females) 1,425 were caused by broncho-pneumonia, 436 by lobar pneumonia, and 1,985 by pneumonia (type not distinguished). The total number is 102 below that for 1913, viz., 3,948, and 153 below the average for the ten years, 1904–13.

Erysipelas.—Seventy-four fatal cases of erysipelas were registered in Ireland during the year 1914, the deaths of males numbering 31 and of females 43. In the preceding year the number of deaths of males was 43 and of females, 31.

Pyæmia, Septicæmia.—Of 17 deaths from pyæmia, 7 were of males and 10 of females, and included in the 122 deaths assigned to septicæmia, 70 were those of males and 52 of females.

There was no report of death from vaccinia or any other effect of vaccination during the year 1914.

Other General Diseases.—There was no death from rabies in Ireland during the year under review. The last recorded mortality was in the year 1898, during which 4 deaths were registered.

To tetanus 31 deaths were assigned, and to mycosis, 4 deaths, as against 33 and 3, respectively, in 1913.

TUBERCULOSIS.

The number of deaths from all forms of tuberculous disease registered in Ireland during the year 1914 was 9,089, a number which is equivalent to a rate of 2·07 per 1,000 of the population. Both in actual number and in proportion to population, the mortality here set forth is the lowest recorded in Ireland for any of the 51 years beginning with the year 1864. The 9,089 deaths for 1914 are 298 under the number registered during the year 1913, namely 9,387, the death rate per 1,000 of the population being 0·07 less.

Compared with the year 1907, when the activity of the community as a whole began to be directed to the eradication of this disease, the deaths recorded in 1914 show a decrease of 2,590 in number. The continued efforts of Urban and Rural District Councils to improve the housing accommodation, the attention to the caring of the sick by the nurses of Lady Dudley's and other nursing societies, and the continued activity of the branches of the Women's National Health Association are recognised by medical men as contributing considerably to this reduction.

Of the 9,089 deaths, constituting 12·7 per cent. of the total deaths from all causes, 4,610 were those of males and 4,479 of females. The deaths of males afforded a rate of 2·11 per 1,000, and those of females a rate of 2·04 per 1,000, a comparison of which with the ten preceding years is supplied by the following statement:—

The subjoined tabular statement shows by sexes the total number of deaths from all forms of tuberculous disease in Ireland for each of the years, 1904–1914, with the rates per 1,000 of the population represented thereby, the decrease in the number of deaths as compared with the previous year, and the percentage of such decrease.

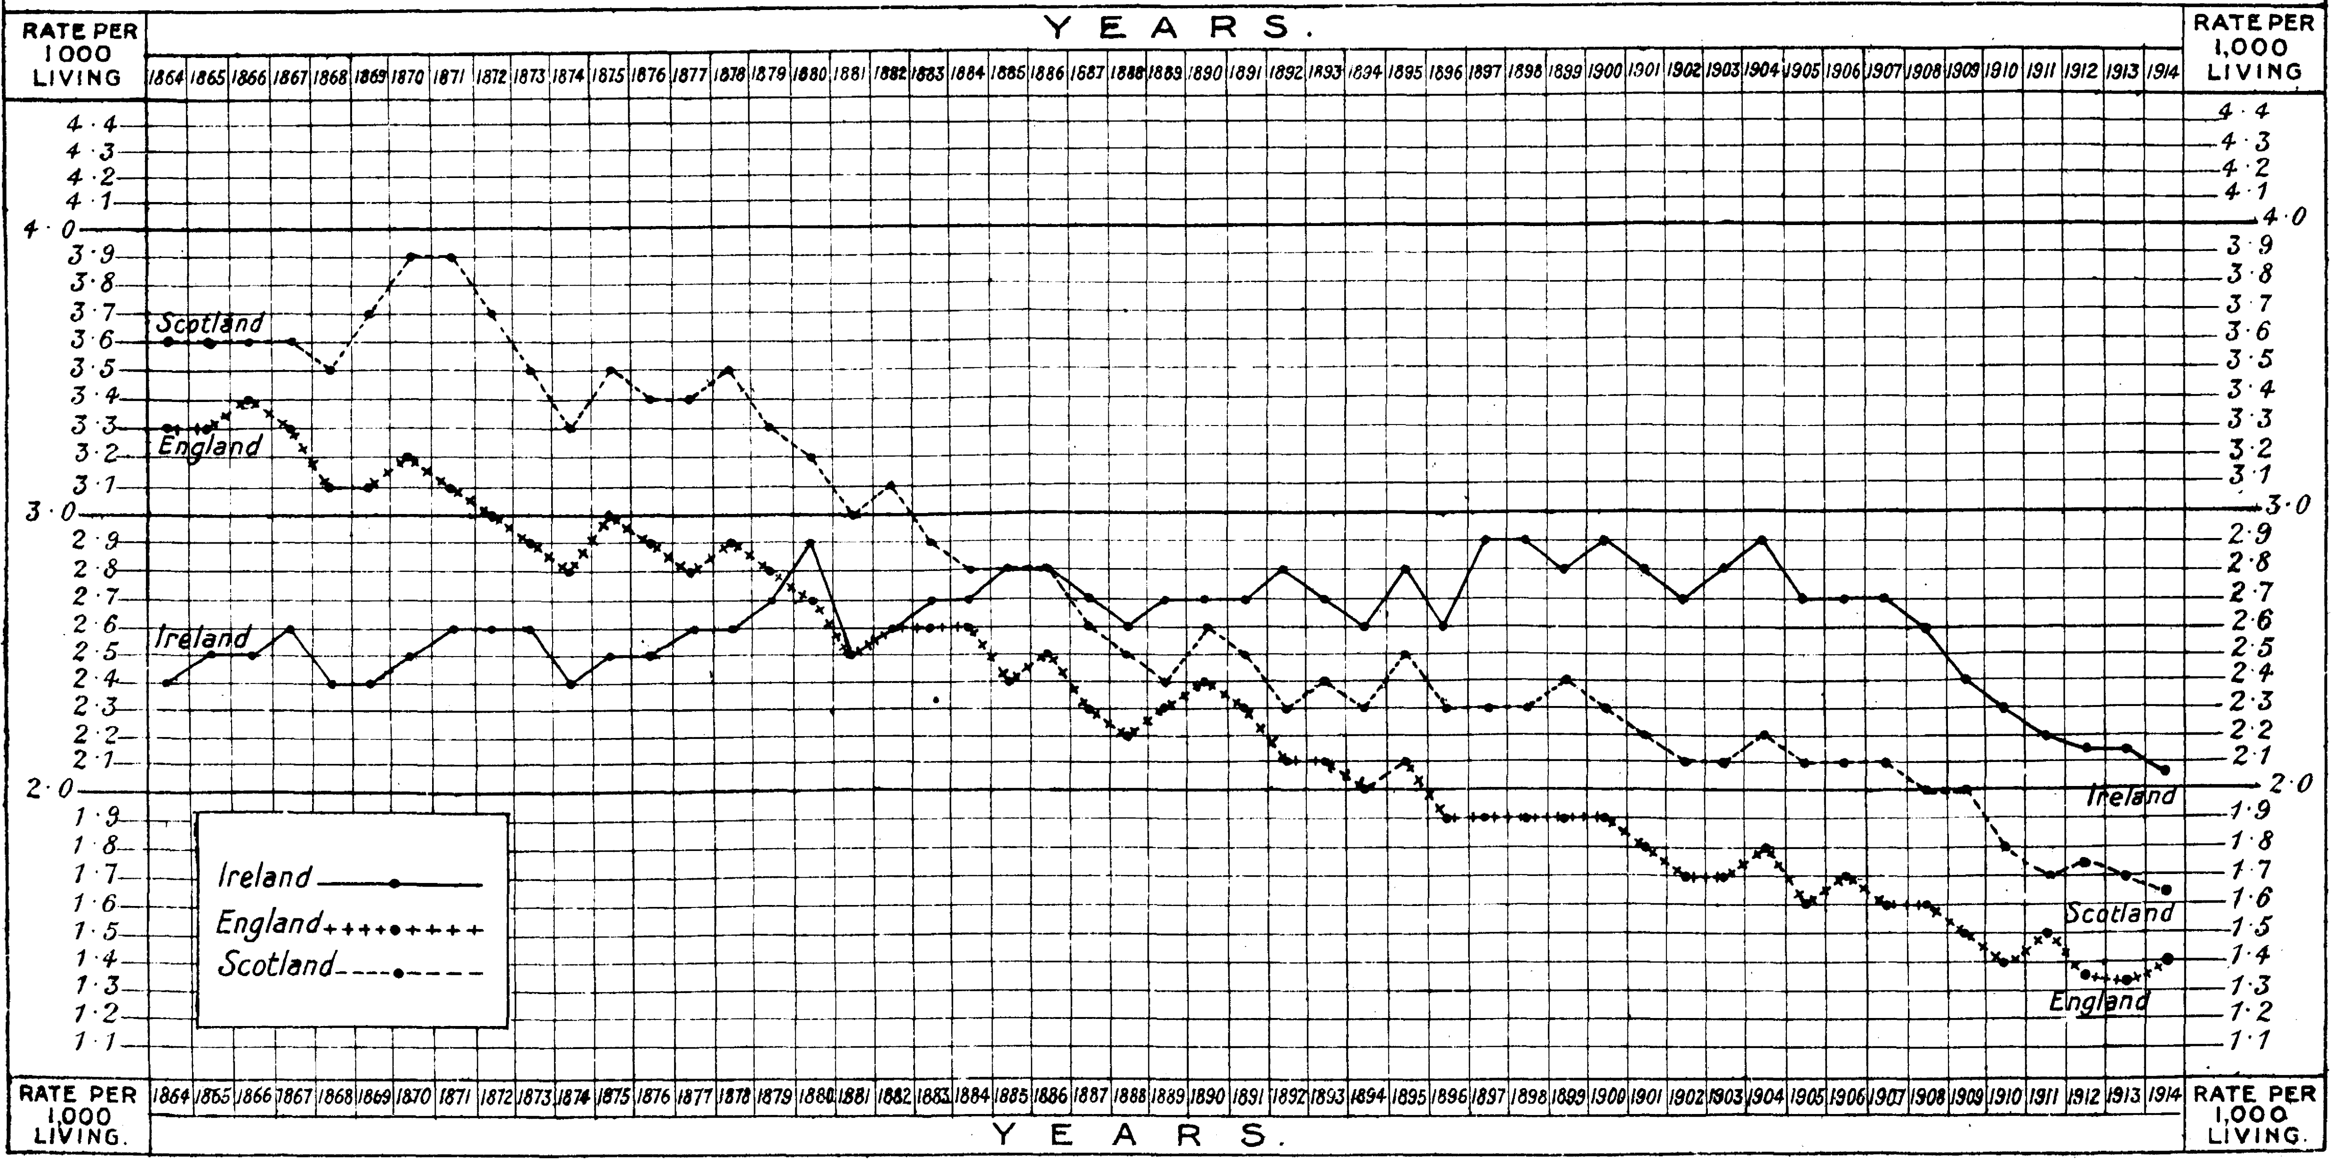
Year.	Males.		Females.		Total.		Decrease.	
	Number of Deaths.	Rate per 1,000 of the Male population.	Number of Deaths.	Rate per 1,000 of the Female population.	Number of Deaths.	Rate per 1,000 of the population.	Number.	Per cent.
1904, ...	6,257	2·86	6,437	2·90	12,694	2·88	—	—
1905, ...	5,776	2·64	6,106	2·76	11,882	2·70	812	6·4
1906, ...	5,820	2·66	5,936	2·69	11,756	2·67	126	1·1
1907, ...	5,792	2·65	5,887	2 67	11,679	2·66	77	0·7
1908, ...	5,568	2·55	5,725	2·60	11,293	2·58	386	3·3
1909, ...	5,294	2·42	5,300	2·41	10,594	2·41	699	6·2
1910, ...	5,017	2·29	4,999	2·28	10,016	2·28	578	5·5
1911, ...	4,731	2·16	4,892	2·23	9,623	2·20	393	3·9
1912, ...	4,682	2·14	4,755	2·17	9,437	2·15	186	1·9
1913, ..	4,672	2·14	4,715	2·15	9,387	2·14	50	0·5
Average, 1904–1913,	5,361	2·45	5,475	2·49	10,836	2·47	—	—
1914, ...	4,610	2·11	4,479	2·04	9,089	2·07	298	3·2

As compared with the average for the decennium, 1904–13, the number of males who died during the year 1914 shows a falling off of 751 or 14 per cent., and the number of females a reduction of 996 or 18 per cent., the combined number for both males and females being 1,747 (or 16 per cent.) under the average for the decennial period referred to.

In comparison with the year 1904, the period having the highest recorded mortality from tuberculosis, it will be found from the above table, that the total number of persons who died from this disease in its various forms in 1914 is 3,605 (or 28 per cent.) less than in 1904, the number of males being 1,647 (or 26 per cent.) less, and the number of females 1,958 (or 30 per cent.) less. Thus, the reduction in the total mortality from tuberculosis is due more to the decrease in the number of deaths of females than of males.

TUBERCULOSIS.

DIAGRAM No. 4.—Showing the Death-rate in Ireland, as compared with England and Scotland, during each of the fifty-one years 1864-1914.



To face page XXV.

In the following statement, the deaths from tuberculous disease registered in each province in 1914 and 1913 are compared.

Statement showing, by sexes, the number of deaths from tuberculous disease registered in each province during the year 1914, as compared with 1913.

	PROVINCE.	1914.	1913.	Decrease.	Increase.
MALES.	Leinster, ...	1,501	1,561	60	—
	Munster, ...	1,166	1,095	—	71
	Ulster, ...	1,504	1,574	70	—
	Connaught,... ...	439	442	3	—
	Total, ...	4,610	4,672	62	—
FEMALES.	Leinster, ...	1,348	1,407	59	—
	Munster, ...	1,004	1,087	83	—
	Ulster, ...	1,718	1,761	43	—
	Connaught,... ...	409	460	51	—
	Total, ...	4,479	4,715	236	—
MALES AND FEMALES.	Leinster, ...	2,849	2,968	119	—
	Munster, ...	2,170	2,182	12	—
	Ulster, ...	3,222	3,335	113	—
	Connaught,... ...	848	902	54	—
	Total, ...	9,089	9,387	298	—

It would appear that of the decrease of 298 in deaths from tuberculous disease in 1914, the province of Leinster is accountable for 119, Ulster for 113, Connaught for 54, and Munster for 12. With respect to the deaths of males, there was an increase of 71 for Munster but decreases were recorded for the other provinces ; and as regards females, each province showed a decrease in the number of deaths from tuberculous disease in 1914, as compared with the preceding year. Diagram No. 2, opposite page xiii., shows that among the principal causes of death tuberculosis is the second, its column standing between old age, the highest, and heart disease, the third highest cause of death. In diagram 4, facing this page, the death rates from tuberculosis in England and Wales, in Scotland and in Ireland, are compared from the year 1864. In the year 1914 the rate in Ireland was 2·07, in Scotland, 1·62, and in England, 1·36 per 1,000 of the respective estimated populations of the three countries.

[TABLE

The numbers and death-rates per 1,000 of the population for pulmonary tuberculosis and for other forms of the disease are given in the following statement, for the years 1904–1914, with annual averages for these years.

STATEMENT showing the number of deaths from pulmonary tuberculosis and from other forms of tuberculous disease registered in Ireland during the Years 1904–1914, with the respective rates per 1,000 of the population, represented thereby.

YEARS.	Deaths from Pulmonary Tuberculosis.		Deaths from other forms of Tuberculous Disease.	
	Number.	Rate per 1,000.	Number.	Rate per 1,000.

1914, ...	7,163	1·63	1,926	0·44

Of the 9,089 deaths from all forms of tuberculous disease, 7,163 were assigned to pulmonary tuberculosis, 609 were from tuberculous meningitis, 545 from tuberculosis of peritoneum and intestines, 117 from tuberculosis of the spinal column, 125 from tuberculosis of the joints, 13 from lupus, 4 from scrofula, 111 from tuberculosis of other organs, and 402 from disseminated tuberculosis.

PULMONARY TUBERCULOSIS.—The 7,163 deaths under this heading comprise 4,147 registered as from pulmonary tuberculosis, 2,554 as from phthisis, 332 as from tuberculosis (not defined), 94 as from acute phthisis, and 36 as from acute miliary tuberculosis. Of the 7,163 deaths (affording a rate of 1·63 per 1,000 of the population), 3,635 were of males (equivalent to a rate of 1·66 per 1,000 of the male population), and 3,528 of females, the latter being equal to a rate of 1·61 per 1,000 of the number of females in the population. The corresponding rates in the three preceding years were for all persons, 1·73, 1·70 and 1·68 ; for males, 1·70, 1·68, and 1·65 ; and for females 1·77, 1·72 and 1·71, respectively.

Deaths assigned to pulmonary tuberculosis constitute nearly 79 per cent. of all the deaths from tuberculosis registered in Ireland during the year 1914.

The number of deaths registered in Ireland during the year 1914 by sexes and age periods from pulmonary tuberculosis, and the death-rates per 1,000 of the population represented thereby are given in the following statement:—

Age-Periods.	Deaths from Pulmonary Tuberculosis in Ireland.					
	Total of both Sexes.		Of Males.		Of Females.	
	Number.	Rate per 1,000.	Number.	Rate per 1,000.	Number.	Rate per 1,000.

An examination of the above table shows that the highest death-rate from pulmonary tuberculosis for both sexes occurs between 25 and 35 years of age, viz., 2·91 per 1,000 of the living at these ages, the rate for the males being 3·01 per 1,000, and for females, 2·80. While the highest rate for males occurs at the age-period above referred to, the highest rate for females occurs at the age-period, 20–25 years, namely, 2·86 per 1,000. At this age-period the death-rate among males is 2·74 per 1,000, ranking third in the order of highest mortality, the second in the list occurring among the male population between 35 and 45 years of age; a high death-rate (2·61 per 1,000) for females is also recorded at the latter age-period. No less than 61 per cent. of all the deaths assigned to pulmonary tuberculosis occurred between 20 and 45 years of age.

Under 5 years of age the male mortality during the year 1914 is slightly higher than that for females, as in 1912; this position was reversed in 1913, but from 5 to 25 years of age the death-rate from this cause for males during the three years, 1912–14, is strikingly less than that for females; from that age onwards, however, according to Irish experience, the mortality among the males shows a decided preponderance over the female mortality from tuberculosis.

TUBERCULOUS MENINGITIS.—The 609 deaths from this disease, affording a rate of 0·14 per 1,000 of the population, include 314 deaths of males and 295 of females. Of the deaths of males, 141 (or 45 per cent.), and of those of females 122 (or 41 per cent.) were of children under 5 years of age.

TUBERCULOSIS OF PERITONEUM AND INTESTINES.—This group includes 79 deaths registered as from tabes mesenterica, 273 from tuberculous peritonitis, 146 from tuberculous enteritis, and 47 from other abdominal tuberculosis, the total of the foregoing amounting to 545 deaths; of the latter, 251 were those of males and 294 of females. Included in the deaths of males are 113 deaths of children under 5 years of age, or 45 per cent. of the total, 12 per cent. representing the deaths of male infants under one year old. In the case of the females, 99 (or 34 per cent.) were deaths of children under 5 years of age, 29 (or 10 per cent.) being deaths of female infants under one year old.

OTHER FORMS OF TUBERCULOUS DISEASE.—The deaths from tuberculous disease in its other forms include 65 deaths of males and 52 of females from tuberculosis of the spinal column ; 69 of males and 56 of females from tuberculosis of the joints ; 5 of males and 8 of females from lupus ; one death of a male and 3 deaths of females from scrofula ; 63 deaths of males and 48 of females from tuberculosis of other organs ; and 207 deaths of males and 195 of females from disseminated tuberculosis.

The following table gives for the Dublin Registration Area the mortality from tuberculous disease among the several social classes for the year 1914, as derived from the Registrar-General's Yearly Summary of the Weekly Returns:—

Class.	Occupation or Social Position.	Annual Rate for the Dublin Registration Area, per 1,000 of the Population in 1911 represented by the Deaths registered in 1914 from

Among the professional and independent class in 1914, the annual rate for all deaths from tuberculous disease was 0·81 per 1,000 of the population of the Dublin Registration Area, and for pulmonary tuberculosis it was 0·74; among the middle class the corresponding rates were 2·03 and 1·58 ; among the artisan and petty shopkeeper class they were 3·22 and 2·49 ; and among the general service class, the rates were 1·93 and 1·52, respectively.

TABLE XIV.—Showing the Number of Deaths from the following causes, viz., Pulmonary Tuberculosis, Tuberculous Meningitis, Tuberculosis of Peritoneum and Intestines, Other Forms of Tuberculosis and from All Causes, registered in Ireland in each of the forty-four years, 1871-1914, with the Rate per 1,000 of the Estimated Population represented by (*a*) Deaths from the above-mentioned forms of Tuberculosis, (*b*) Deaths from All Causes; and the percentage of total Deaths caused by the tuberculous diseases referred to.

CANCER.—Of the 3,807 deaths returned as from carcinoma, sarcoma, cancer and malignant disease, 1,775 were deaths of males and 2,032 of females. The deaths of males and females combined represent a rate of 0·87 per 1,000 of the population, those of males affording a rate of 0·81 per 1,000 males living, and those of females, 0·93 per 1,000 of the number of females in the population. The 3,807 deaths are 93 under the number recorded during the year 1913, but are 321 above the average for the decennium, 1904–13. The deaths from the various forms of cancer in 1913, viz., 3,900, was the highest number recorded in Ireland, the mortality for 1914 coming next with 3,807 deaths.

Particulars regarding the mortality from cancer by ages at death for each sex is given in Table XV., page xxxi., also the part of the body affected by the disease.

From this it would appear that up to 35 years there is but slight difference between the mortality for each sex; between 35 and 65 it is higher for females than for males, the rate for males between 35 and 45 years being 0·47 per 1,000; from 45 to 55 it was 1·61; and from 55 to 65, the rate per 1,000 of the population at these ages was 3·46. Among females the respective rates were 0·78, 2·19, and 3·59. At the age-period, 65–75, the rate for cancer among males was 3·70 per 1,000, while for females it was 3·25. For both sexes the highest rate is reached in the cases of the persons aged 75 years and upwards, the mortality for males being 4·33 per 1,000 males living at these ages, while the rate among the female inhabitants so circumstanced was 3·95 per 1,000.

As regards the parts affected, by far the largest number of deaths were from cancer of the stomach, no less than 481, or 27 per cent. of the males and 459 or 23 per cent. of the females were so affected; 196 males and 231 females died from cancer of the liver and gall bladder; 158 males and 191 females from cancer of the intestines; 115 males and only 9 females from cancer of the tongue.

To cancer of the breast 5 deaths of males and 331 of females were attributed. Cancer of the uterus caused 247 deaths. In the case of females, cancer of the stomach, breast and uterus, constituted more than 51 per cent. of all the deaths of females from this disease.

---

* Including Carcinoma, Sarcoma and Cancer, Malignant Disease.

Tumours (not including those of the brain, uterus, or ovary), caused the deaths of 17 males and 27 females during the year 1914. In all these cases the tumours were not malignant, or further information concerning their nature was not available. The parts affected were as follows :—

Statement showing the parts affected by the Tumours which caused the deaths of 17 males and 27 females.

Parts affected.	Males.	Females.	Parts affected.	Males.	Females.

Thyroid, ...	1	—	Total, ...	17	27

Rheumatism.—The deaths of 661 persons were allocated to rheumatic affections, comprising 166 (88 males and 78 females) from acute rheumatism, 102 (38 males and 64 females) from rheumatic arthritis, 17 (6 males and 11 females) from rheumatic endocarditis, pericarditis ; and 376 (154 males and 222 females) from chronic rheumatism.

In the year 1913, the deaths returned under this heading amounted to 654 and of these 388 were attributed to chronic rheumatism.

Gout.—Eleven deaths were assigned to gout, and 13 to rheumatic gout, the figures for the preceding year being 8 and 11, respectively.

Diabetes.—Of 404 deaths from diabetes, 206 were those of males and 198 of females. In 1913, the persons who died from this malady numbered 416, of whom 230 were males and 186 were females.

Alcoholism.—Included in the 130 deaths referred to alcoholism are 108 males and 22 females. In 1913, the number was 133, and in 1912 it was 132.

Apart from the deaths in 1914, returned as being directly attributable to alcoholism, it would appear that there were 299 deaths from cirrhosis of the liver, 196 of these being deaths of males and 103 of females, the deaths of persons of both sexes in each of the years 1912 and 1913 numbering 272.

Meningitis.—There were 592 deaths from meningitis and encephalitis, 340 being those of males and 252 of females, the total affording a rate of 0·14 per 1,000 of the population. The average number of such deaths during the ten years 1904–13 was 717, and during the three years, 1911–13, the respective numbers were 638, 631 and 632.

Cerebro-spinal Fever.—To this heading 16 deaths were assigned, 11 being deaths of males and 5 of females. In the previous year 16 deaths from this cause were also recorded, 9 being deaths of males and 7 of females.

General Paralysis of the Insane.—The deaths of 103 persons (88 males and 15 females) were allocated to this cause. In the year 1913 the number was 100.

EPILEPSY.—The 260 deaths from epilepsy comprise 145 deaths of males and 115 of females, as against 143 deaths of males and 133 of females in 1913.

CONVULSIONS.—The deaths attributed to convulsions for the year 1914 amounted to 1,181. Of these, 964, or 82 per cent., were those of infants under one year of age, and they represent 11·2 per cent. of the deaths from all causes of infants under one year of age.

The use of the term " convulsions " as a primary cause should be avoided, if possible, such condition being only symptomatic of the true cause of death.

LOCOMOTOR ATAXY.—The deaths from locomotor ataxy numbered 31 ; of these, 24 were deaths of males and 7 of females, as against 30 deaths of males and 5 of females in 1913.

CEREBRAL TUMOUR.—Deaths from tumour of the brain as to which no further information could be obtained numbered 53—the deaths of males being 27 and of females 26, the total number in the year 1913, so circumstanced amounting to 42.

Further inquiry was made concerning the deaths returned from this cause. As a result 11 deaths were transferred to cancer, 5 to syphilis and 5 to tuberculous meningitis.

DISEASES OF THE HEART.—The deaths under this designation, numbering 7,968, constitute more than 11 per cent. of all the deaths registered in Ireland during the year 1914, and afford a rate of 1·82 per 1,000 of the population. They are 470 under the average for the past 10 years, but 49 above the number recorded in 1913.

In the Diagram (2) facing page xiii., the mortality from these causes stands third.

Included in the 7,968 deaths are 2,497 from valvular disease, 211 from fatty degeneration, 95 from angina pectoris, 36 from pericarditis, and 12 from infective endocarditis.

LARYNGITIS.—Laryngitis caused 105 deaths and laryngismus stridulus, 16, the corresponding numbers for 1913 being 109 and 18.

BRONCHITIS.—This disease accounted for 6,009 fatal cases representing 1·37 per 1,000 of the population and 8·4 per cent. of the deaths from all causes registered. The number of deaths in 1914 is 567 below the number in 1913 and 1,320 under the average for the ten years, 1904–13. Of the 6,009 deaths, 2,784 were those of males and 3,225 of females.

Diagram No. 2 shows the relative position of this disease, as compared with 21 other principal causes of death.

PLEURISY.—To this heading 170 deaths were assigned, deaths of males numbering 106 and of females, 64. Included with the 170 deaths are 15 deaths from empyema, regarding which, as the result of special inquiries, no further information was forthcoming.

In connection with the 314 deaths registered as from the latter cause during the eleven years, 1904–14, the following table shows the specified causes to which the deaths from empyema were assigned, as the result of the special inquiries referred to.

Table showing for the years 1904–1914, by age-periods, the diseases or causes with which the deaths directly attributed to Empyema of 314 persons (228 males and 86 females) were associated.

Diseases or causes (by Age-Periods) with which 228 Deaths of Males from Empyema were associated.

The 314 deaths dealt with in above table include 99 deaths from empyema which as the result of inquiry were assigned to tuberculous disease, 72 being deaths of males and 27 of females. No further information could be obtained as regards 131 deaths registered as from empyema.

GASTRIC ULCER.—The deaths caused by gastric ulcer numbered 312—of males 152 and of females 160. The number of deaths from this condition in 1913 was 308, of males 145 and of females 163.

DUODENAL ULCER.—The deaths of 52 persons were referred to this cause, 43 being males and 9 females.

APPENDICITIS AND PERITYPHLITIS.—To these causes 202 deaths were attributed, comprising 121 of males and 81 of females. In the preceding year the corresponding figures were 215, 123 and 92.

CIRRHOSIS AND OTHER DISEASES OF THE LIVER.—During the year 1914, there were 299 deaths (196 of males and 103 of females) from cirrhosis of the liver, as against 272 in each of the years 1912 and 1913. Acute yellow atrophy of liver in 1914 caused 12 deaths; biliary calculi, 47 deaths; and other diseases of the liver, 178 deaths.

PERITONITIS.—The deaths finally assigned to peritonitis, resulting from the investigation as to the cause or causes which produced this condition, amounted to 89, the deaths of males being 42 and of females, 47. The number of deaths registered in 1914 as from peritonitis and assigned to other causes was 95, including 19 transferred to appendicitis, 16 to gastric ulcer, 4 to intestinal obstruction, 11 to other diseases of intestines, 7 to puerperal septicæmia and accidents of pregnancy and child-birth, and 6 to accidental violence.

DISEASES OF THE KIDNEYS.—Diseases of the kidneys caused 1,720 deaths, of males 946 and of females 774, comprising 399 from acute nephritis, 1,155 deaths from chronic Bright's disease, 79 deaths from uræmia, and 87 deaths from other diseases of the kidney. The 1,720 deaths represent a rate of 0·39 per 1,000 of the population.

DISEASES AND ACCIDENTS OF PREGNANCY AND CHILDBIRTH.—From puerperal septic conditions 214 deaths were recorded, corresponding to a mortality rate among mothers of 2·17 per 1,000 births registered. There were 35 deaths from accidents of pregnancy, 108 deaths from puerperal hæmorrhage, 88 deaths from other accidents of childbirth, 9 deaths from puerperal albuminuria, 40 deaths from puerperal convulsions, and 3 deaths from puerperal insanity, making a total of 283, corresponding to a mortality rate of 2·86 mothers to every 1,000 births registered. As regards the deaths resulting from pregnancy and childbirth, complicated with pre-existing or co-existing diseases, such deaths are assigned to these diseases, and the deaths so assigned are incorporated in the following table (XIII.), which shows the total mortality connected with the puerperal condition, namely:—(1) mortality from septic conditions, (2) mortality from intrinsic puerperal causes, and (3) mortality from pre-existing disease or condition complicating pregnancy and childbirth.

TABLE XIII.—Deaths of Women in Ireland in 1914 definitely returned as either caused by or associated with Pregnancy or Childbearing.*

* These deaths are included in the general tables of Causes of Death.

The number of deaths of women directly attributable to, or associated with, pregnancy or childbirth, is shown in the following table for each of the years 1904–1914, under the circumstances before mentioned, and also the rate per 1,000 births registered during each of these years, with an average rate for the 10 years, 1904–1913 :—

YEARS.	Deaths from Puerperal Septic Diseases.		Deaths from Accidents of Pregnancy or Childbirth.		Total Deaths from Puerperal Septic Diseases and Accidents of Pregnancy or Childbirth.		Deaths from causes associated with Pregnancy or Childbirth (not included in foregoing).		Total Deaths caused by or associated with Pregnancy or Childbirth.	
	Number	Rate per 1,000 Births.	Number	Rate per 1,000 Births	Number	Rate per 1,000 Births.	Number	Rate per 1,000 Births.	Number	Rate per 1,000 Births.
1904, ...	216	2·08	367	3·54	583	5·62	99	0·95	682	6·57
1905, ...	227	2·21	346	3·36	573	5·57	83	0·81	656	6·38
1906, ...	234	2·26	373	3·60	607	5·86	69	0·67	676	6·53
1907, ...	163	1·60	342	3·36	505	4·96	84	0·83	589	5·79
1908, ...	189	1·86	341	3·34	530	5·20	85	0·83	615	6·03
1909, ...	222	2·16	339	3·30	561	5·46	83	0·81	644	6·27
1910, ...	191	1·87	351	3·44	542	5·31	64	0·63	606	5·94
1911, ...	186	1·83	328	3·22	514	5·05	64	0·63	578	5·68
1912, ...	215	2·13	334	3·31	549	5·43	50	0·50	599	5·93
1913, ...	193	1·93	334	3·33	527	5·26	58	0·58	585	5·84
Average,10 years,1904-13	204	1·99	345	3·38	549	5·37	74	0·72	623	6·09
1914, ...	214	2·17	283	2·86	497	5·03	58	0·59	555	5·62

It would appear from the above table that the number of deaths associated with pregnancy and childbirth during the year 1914 was 555, being 30 under the number of such deaths for the preceding year and 68 under the average for the ten years, 1904–13. The corresponding rates per 1,000 births for the year 1914, for the year 1913, and the average for the 10 years, 1904–13, were 5·62, 5·84, and 6·09 respectively.

VIOLENCE.—There were 1,843 deaths by violence, comprising 1,685 accidental deaths, 39 homicidal and 119 suicidal. Of the accidental deaths, 1,154 were those of males, and 531 of females ; the homicidal include 22 deaths of males and 17 of females ; and the suicidal cases comprise 94 deaths of males and 25 of females. There was no record of an execution in Ireland during the year 1914.

Of the 1,843 accidental deaths, 532 were caused by injuries of various kinds, exclusive of 398 by burns (196 being those of children under 5 years of age), 298 by drowning, 84 by absorption of deleterious gases, 59 by excessive cold, 12 by effects of heat, and there were 27 deaths from acute poisoning, including 4 from poisoning by food, and 23 by other acute poisonings.

The particulars regarding deaths by poisoning are given in Table XVI. page xxxvii.

ILL-DEFINED OR NOT SPECIFIED CAUSES OF DEATH.

Where it is possible to employ a more definite cause, the following terms should not be used for denoting the cause of death :—Dropsy, syncope, sudden death, heart failure, atrophy, debility, marasmus, teething, pyrexia, croup, paralysis (without specified cause), and old age.

UNCERTIFIED CAUSES OF DEATH.

Of the deaths registered in Ireland during the year 21·3 per cent. were returned as uncertified, there having been no medical attendant during the last illness. In the preceding year (1913) the corresponding percentage was 22·6, and in the ten years, 1904–13, it was 24·6, varying from 28·3 in 1904 to 22·6 in each of the years 1911, 1912 and 1913.

In the province of Leinster 14·7 per cent. of the total deaths registered therein during the year 1914 were uncertified ; in Munster, 24·9 ; in Ulster, 16·2 ; and in Connaught, 47·7.

The proportion per cent. of uncertified deaths in England and Wales for the year 1914 was 1·2, that in Scotland for the year 1913 being 1·9.

INQUESTS.

The number of inquests returned by the Registrars during the year 1914 was 1,650, or one inquest in every 43 deaths registered.

TABLE XVI.—Showing the Deaths registered from Poison* in 1914, distinguishing the Sex and Age of deceased, the Name of the Poison or Poisonous Gas, and whether Accidental, Suicidal, or Homicidal.

* Including chronic occupational poisoning.

AGES AT DEATH.

The following statement shows, by sexes, the mortality from all causes in Ireland during the Year 1914, at the undermentioned age-periods per 1,000 of the number of persons living at these ages.

SEXES.	Mortality from all causes per 1,000 Living at Ages—												
	All Ages.	Under 5 Years.	5—	10—	15—	20—	25—	35—	45—	55—	65—	70—	75 years and upwards
MALES, ..	16·36	32·73	3·60	2·27	3·71	5·23	6·68	9·10	15·43	27·75	37·90	52·91	124·65
FEMALES,	16·21	28·88	3·66	2·93	4·51	5·37	6·59	9·26	13·82	27·24	35·24	47·26	116·51
TOTAL,	16·28	30·83	3·63	2·59	4·11	5·30	6·63	9·18	14·63	27·49	36·52	49·74	120·40

From this table it would appear that between 5 and 25 years of age and also at the age period, 35–45, the mortality among the female population of Ireland during the year 1914 is higher than that of males ; at the other age-periods the mortality of the males exceeds that of the females.

Of the total deaths registered 13,406 were of children under 5 years of age, which number is equivalent to a rate of 30·83 in every 1,000 of the number living at that age. Of the deaths of children under 5 years of age, 7,215 were boys and 6,191 girls, representing respectively, 32·73 in every 1,000 boys, and 28·88 in every 1,000 girls, under the age of 5 years.

Deaths of persons aged 65 years and upwards are equivalent to 65·67 per 1,000 of the number of the living at that age, the rate for deaths at the age-period 65–70 years being 36·52 per 1,000 ; at the age-period 70–75 the rate was 49·74, and for deaths of persons aged 75 years and upwards it was 120·40 per 1,000 of the living at that age-period.

Of the total deaths registered 450 were of persons stated to have been aged 95 years or upwards—207 males and 243 females, including 90 (32 males and 58 females) who were returned as having been aged 100 years or upwards. Owing to the absence of public records for remote periods absolute verification of the ages of very old persons is not possible ; but on secondary inquiries having been made as regards persons returned during some recent years as centenarians, it was found that the age was correctly stated, in almost every instance, so far as the Registrars could ascertain.

OCCUPATIONAL MORTALITY.

In the table on pages xliv. and xlv., extracted from the Registrar-General's Yearly Summary of the Weekly Returns, the mortality in 1914 among the several social grades of the population of the Dublin Registration Area is shown.

From this table it will be seen that among the families of the Professional and Independent class the annual death-rate from all causes was 14·7 per 1,000 of the population in 1911 ; among the Middle class it was 14·6 ; among the Artisan class and Petty Shopkeepers the rate was 18·4 ; and among the General Service class it was 22·5 per 1,000.

INFANT MORTALITY.

During the year 1914, the deaths of infants under one year of age numbered 8,622—males, 4,778 and females, 3,844—affording a rate of 87 in every 1,000 births registered, as against 97 per 1,000 births in 1913, and an average of 94 per 1,000 births registered during the ten years 1904–1913.

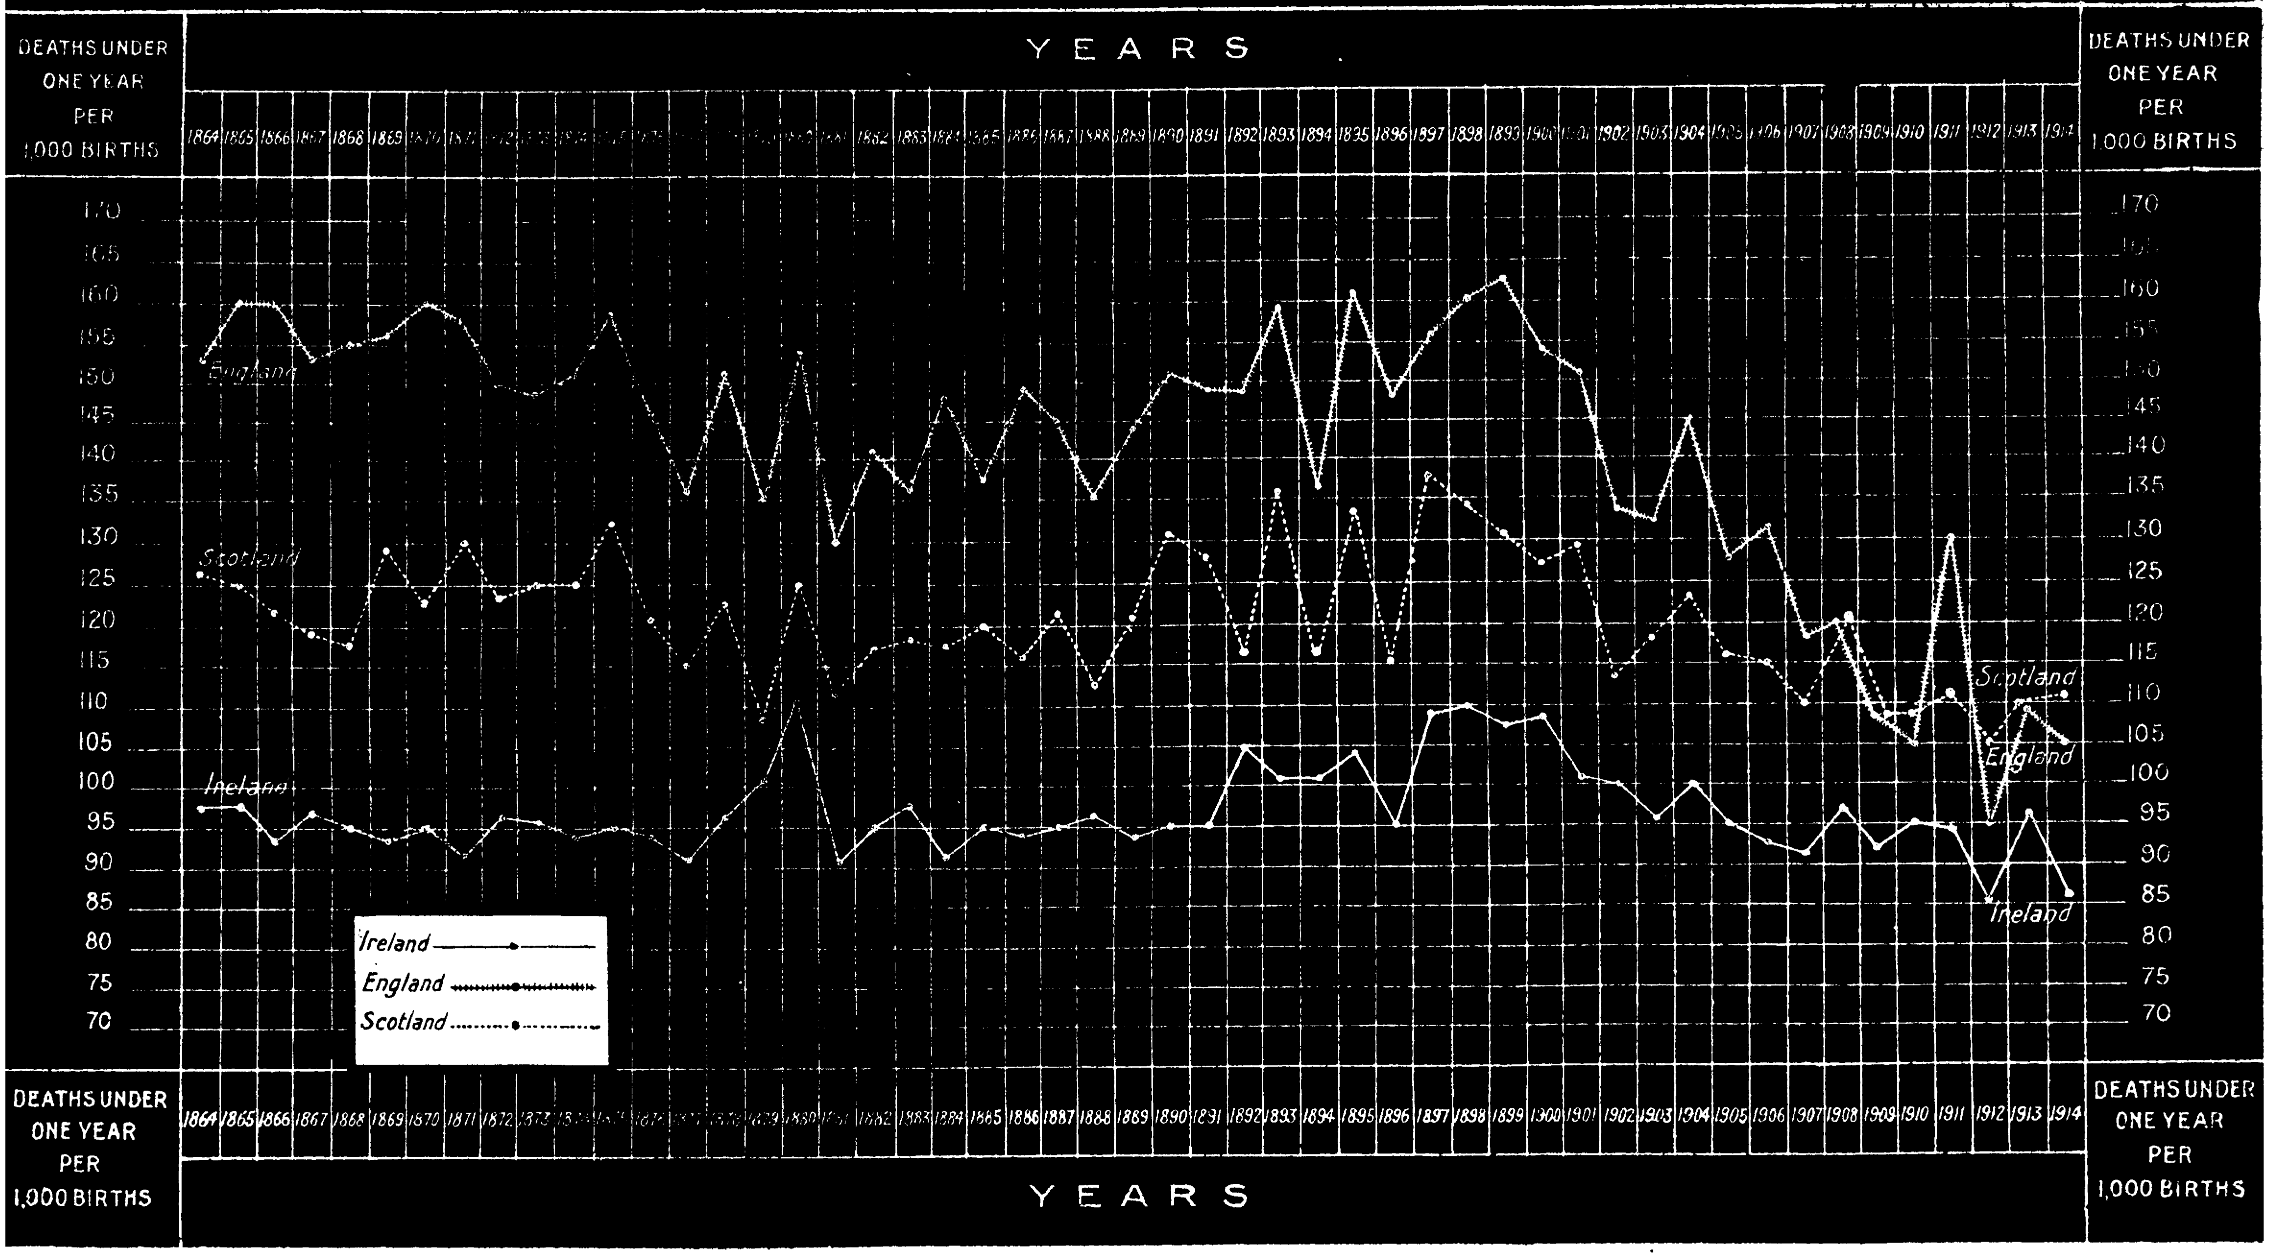
In other words for every 10,000 children born alive, 873 infants died before they reached one year of age, or out of every 11 babies born in 1914 one died within the year of its birth.

In order to facilitate the study of the subject of Infant Mortality in Ireland, the great importance of which cannot be over-estimated, the following Diagrams and Map have been prepared :—

Diagram No. 5.—Showing the Infant Mortality in Ireland during each of the 51 years, 1864–1914, as compared with that in England and Wales and Scotland, facing this page.

INFANT MORTALITY.

Diagram No. 5 Showing the Deaths of Infants under One Year of Age per 1,000 Births registered in Ireland, as compared with England and Scotland during each of the fifty one years 1864-1914.



6080.) Wt.P. — 3.12.875.7/15.A.T.&Co.,Ltd.

To face page XXXVIII.

Diagram No. 6.—Showing, by sexes, a comparative view of 14 of the Principal Causes of the deaths of Infants in Ireland during the year 1914, facing page xli.

Diagram No. 7.—Showing, by sexes, the number of deaths of Infants under 3 months old per 1,000 births registered during each of the years, 1907–14, facing page xlii.

Map.—Showing the Infant Mortality for each County in Ireland during the year 1914. facing page xliii.

From Diagram No. 5, it will be seen that in later as compared with the earlier years, the Infant Mortality for England and Wales has, generally speaking, declined considerably, that for Scotland has also declined, but not to the same extent, while for Ireland there is but a small downward tendency throughout the 51 years covered by the Diagram. In this connection, however, it must be borne in mind that in the case of England and Wales and Scotland the birth-rate has decreased to a much greater extent than in Ireland.

The infant mortality rates for England and Wales during the three years, 1912–14, were 95, 108 and 105 per 1,000 births registered, in Scotland they were 105, 110 and 111, as against 86, 97 and 87, respectively, in Ireland.

In the following table the infant mortality rate is given by sexes for "Civic" unions, *i.e.*, unions containing towns which, in the year 1911 had a population of 10,000 or upwards, and for the remainder ot Ireland.

Table showing for Ireland, for Unions containing towns which, in 1911, had a population of 10,000 inhabitants or upwards ("Civic Unions"), and for the remainder of the country, the proportion of deaths by sexes of infants under one year old, distinguishing those under 3 months, 3 to 6 months, and 6 to 12 months, per 1,000 births registered in the year 1914.

AREAS.	MALES.				FEMALES.				TOTAL.			
	Under 3 months.	3–6 months.	6–12 months.	Under one year.	Under 3 months.	3–6 months.	6–12 months.	Under one year.	Under 3 months.	3–6 months.	6–12 months.	Under one year.
Total "Civic Unions."	70·8	22·7	35·5	129·0	59·1	21·2	31·8	112·1	65·1	22·0	33·6	120·7
Remainder of Ireland.	45·9	10·8	13·5	70·2	37·6	9·5	10·1	57·2	41·9	10·2	11·8	63·9
Total of Ireland	56·1	15·7	22·5	94·3	46·5	14·3	19·0	79·8	51·5	15·0	20·8	87·3

This table shows that the infant mortality rate for Ireland for 1914 was 87·3 per 1,000, that for the "civic" unions it was 120·7 per 1,000, and that for the remaining unions of Ireland it was 63·9 per 1,000; in the year 1913 the figures for the "civic" and remaining unions were 128·6 per 1,000, and 74·8 per 1,000 respectively. Thus the infant mortality both in the "civic" and in the rural unions of Ireland shows a decrease as compared with 1913.

The Map, facing page xliii., illustrates the following table, which gives the facts arranged in order from the county having the lowest rate to that which has the highest.

[TABLE

Table showing, by counties, the number of deaths of Infants under one year of age per 1,000 Births registered during the year 1914.

County.	Infant mortality per 1,000 Births.	County.	Infant mortalit per 1,000 Births.
Roscommon,	37·7	Wicklow,	70·4
Cavan,	40·4	Kildare,	71·2
Leitrim,	41·9	Tipperary, S.R.	72·0
Donegal,	48·0	Westmeath,	72·4
Longford,	57·6	Tyrone,	73·2
Sligo,	58·0	Louth,	76·8
Fermanagh,	59·0	Kilkenny,	77·0
Galway,	59·6	Cork Co. and Co. Borough,	77·7
Mayo,	59·7	Wexford,	81·7
King's,	60·0	Armagh,	82·1
Queen's,	61·0	Limerick Co. and Co. Borough,	98·2
Carlow,	61·6	Down Co. and Belfast Co. Borough, part of.	98·4
Monaghan,	62·0	Waterford Co. and Co. Borough,	100·1
Tipperary, N.R.	65·6	Antrim Co. and Belfast Co. Borough, part of.	128·0
Clare,	66·0	Dublin Co. and Co. Borough,	143·2
Londonderry Co. and Co. Borough	66·6		
Meath,	68·2		
Kerry,	68·3		

The five counties having the lowest rates of infant mortality are Roscommon (37·7), Cavan (40·4), Leitrim (41·9), Donegal (48·0), and Longford (57·6); the highest five county areas being Dublin County and county borough (143·2); Antrim county and Belfast county borough, part of (128·0); Waterford county and county borough (100·1); Down county and Belfast county borough, part of (98·4); and Limerick county and county borough (98·2).

The infant mortality for the Dublin Registration Area and Belfast in comparison with that for London, Liverpool, Edinburgh and Glasgow for a period of 10 years is given in the following table.

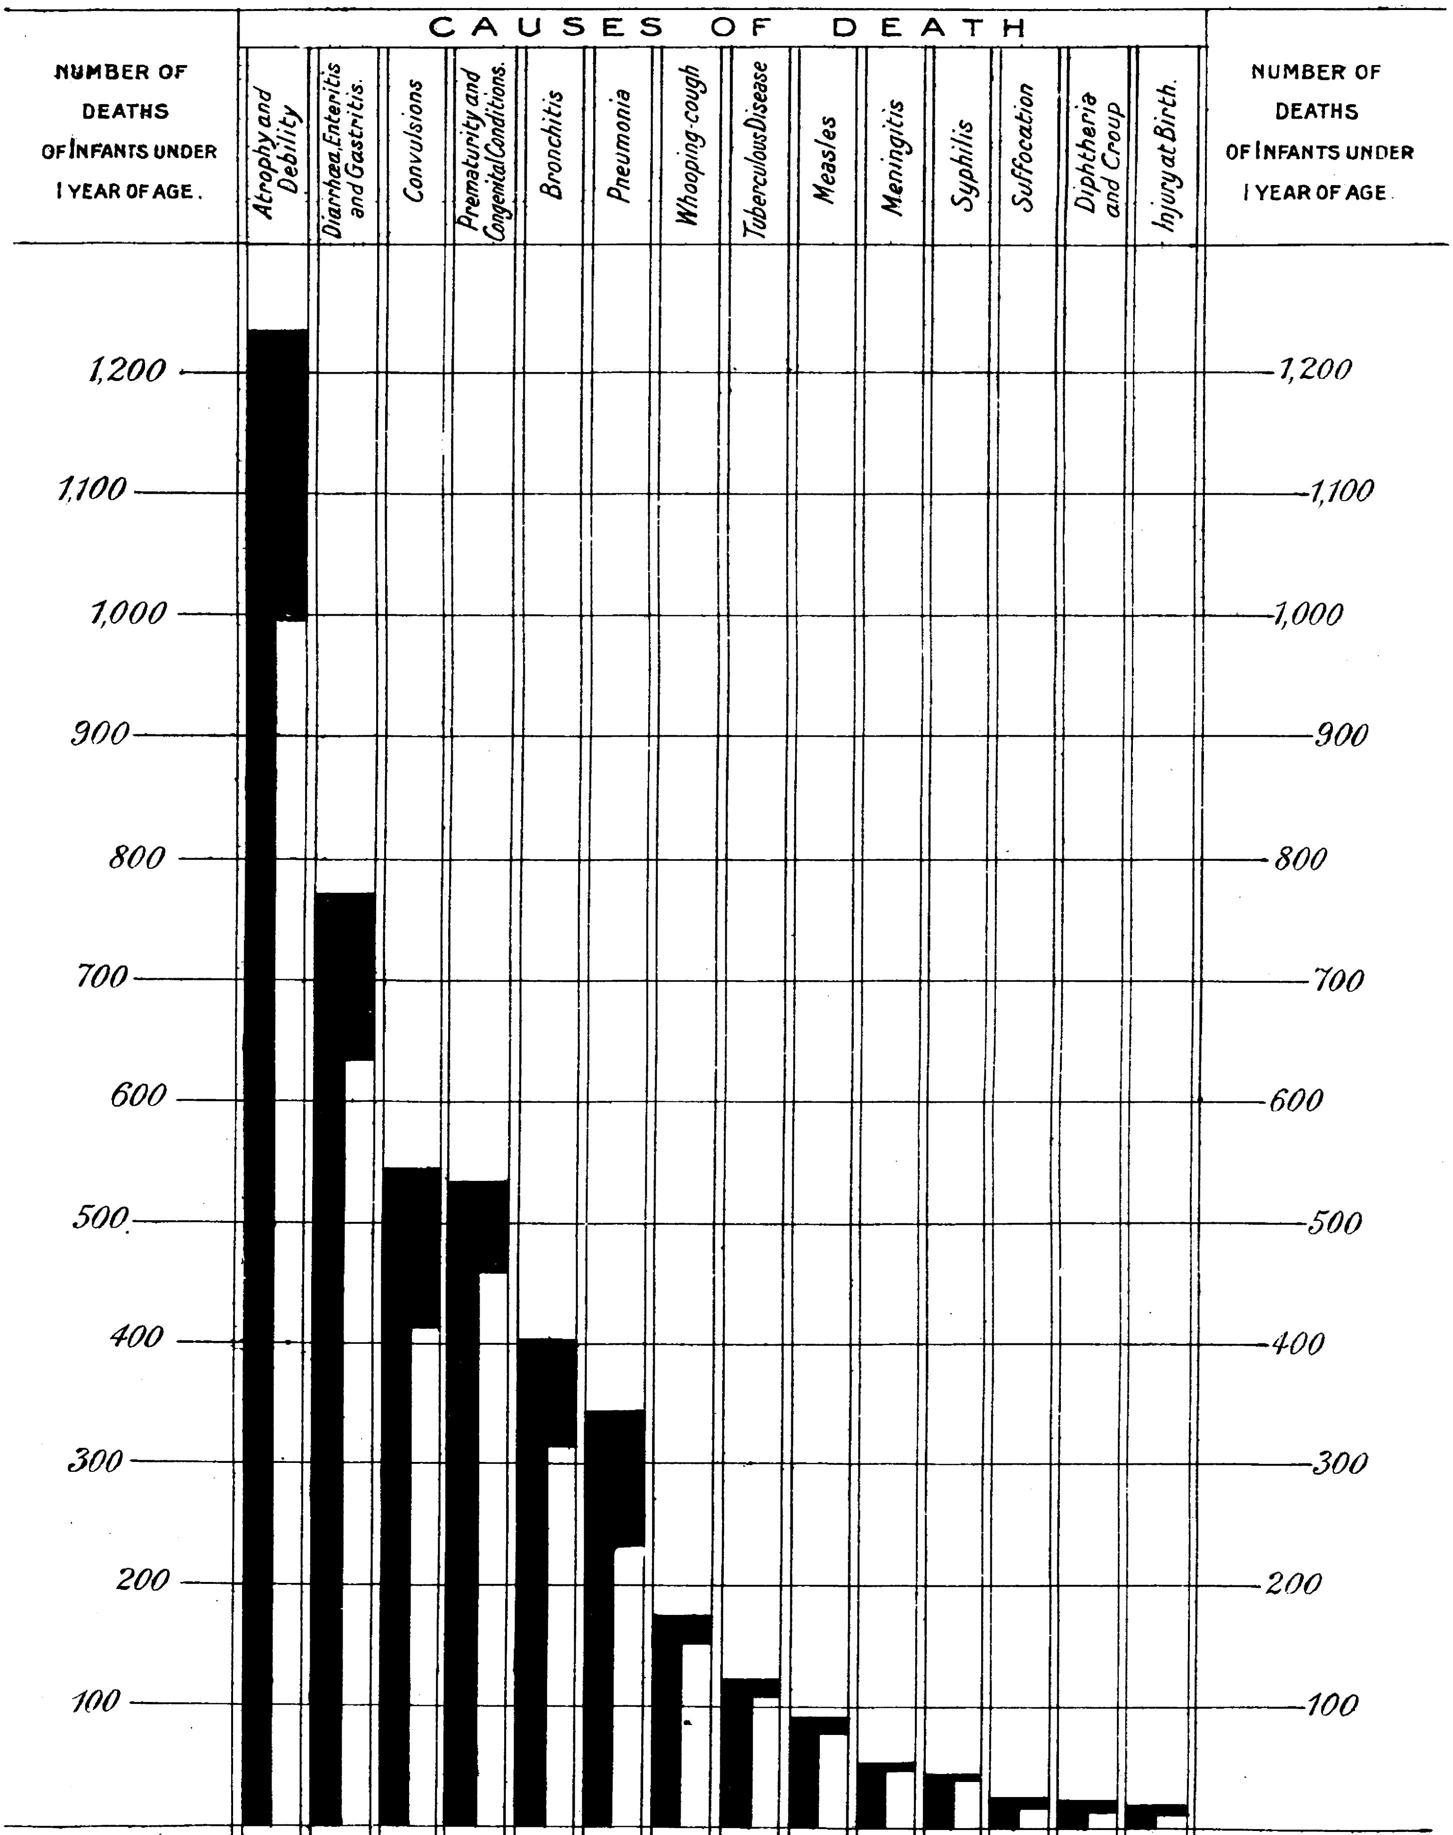
Table showing the number of deaths of infants under one year of age to every 1,000 births in the Dublin Registration Area, in the county borough of Belfast, and in London, Liverpool, Edinburgh and Glasgow, during the years 1905-1914.

AREAS.	Deaths of Infants under one Year of Age to every 1,000 Births.									
	1905.	1906.	1907.	1908.	1909.	1910.	1911.	1912.	1913.	1914.
Dublin Registration Area,	143	146	156	146	141	142	156	140	153	145
Belfast County Borough,	136	144	136	147	139	143	128	129	144	143
London,	130	131	116	113	108	103	128	90	105	104
Liverpool,	153	172	144	141	144	140	154	125	131	139
Edinburgh,	133	118	127	122	119	111	118	113	101	110
Glasgow,	131	131	130	137	133	121	139	124	129	133

For the Dublin Registration Area the infant mortality rate fell from 153 in 1913 to 145 in 1914, for Belfast from 144 to 143, and for London from 105 to 104; but Liverpool, Edinburgh and Glasgow show increases in their rates as compared with those for the year 1913. It will be observed that the rates for Dublin and Belfast are still higher than for any of the other areas mentioned.

For the year **1914**, the causes of the deaths of infants are given in detail in the abstracts commencing on page 120. These causes are summarised in the table which follows, in which deaths from certain causes are grouped together. The death rates of infants by sexes and causes are given in three groups of age-periods, namely, under 3 months, from 3 months to 6 months, and from 6 months to 12 months, for the year 1914, and the infant mortality tor that year is compared with each of the seven years, 1907–13.

DIAGRAM No. 6.—Showing Infant Mortality by sexes for Ireland from Fourteen Principal Causes during the year 1914.



Death rates per 1000 Births registered		Atrophy and Debility	Diarrhœa, Enteritis and Gastritis.	Convulsions	Prematurity and Congenital Conditions.	Bronchitis	Pneumonia	Whooping-cough	Tuberculous Disease	Measles	Meningitis	Syphilis	Suffocation	Diphtheria and Croup	Injury at Birth.		Death rates per 1000 Births registered
	Males	24·40	15·22	10·78	10·57	7·93	6·83	3·38	2·39	1·86	1·11	0·93	0·65	0·59	0·41	Males	
	Females	20·74	13·17	8·68	9·55	6·73	4·82	3·26	2·29	1·75	1·04	0·87	0·46	0·40	0·27	Females	

Males ■ Females □

NOTE.—According to Irish experience 1,237 male infants under one year of age, died from atrophy, etc., during the year 1914, representing 24 to every 1,000 male children born alive; 998 female infants died from the same cause, being equivalent to 21 per 1,000 female children born alive, and so on for the other causes specified in the diagram.

(6080.) Wt. P. – 3.12.875.7; 15. A.T.&Co., Ltd.

To face page XII.

Table showing for Ireland the Mortality by certain causes among infants under 12 months old, per 1,000 Births registered in the eight years 1907-1914, distinguishing between the males and females under 3 months old, 3 months and under 6 months, and 6 months and under 12 months, whose deaths were registered in 1914.

Diagram No. 7, facing this page, has been derived from the table which follows.

TABLE showing for each of the years 1907–14 the number of deaths of Male and Female Infants under 3 months old per 1,000 Births registered in Ireland, in "Civic" Unions (unions containing towns of 10,000 inhabitants and upwards) and in the remainder of the country.

—		Years.							
		1907.	1908.	1909.	1910.	1911.	1912.	1913.	1914.
Total "Civic Unions."	Males	70·8	76·4	75·8	71·3	76·9	71·7	80·3	70·8
	Females	58·5	60·8	59·9	59·1	59·8	54·3	59·6	59·1
	Total	64·8	68·8	68·1	65·3	68·6	63·2	70·2	65·1
Remainder of Ireland	Males	51·3	53·3	47·9	50·3	49·5	48·8	55·0	45·9
	Females	39·5	41·8	40·3	42·9	40·0	37·6	41·2	37·6
	Total	45·6	47·7	44·2	46·7	44·9	43·3	48·2	41·9
Total of Ireland ..	Males	59·1	62·5	59·0	58·8	60·4	58·1	65·5	56·1
	Females	47·2	49·5	48·1	49·4	47·9	44·4	48·8	46·5
	Total	53·3	56·2	53·7	54·2	54·4	51·4	57·4	51·4

It will be observed from an examination of the above table that taking Ireland as a whole, the mortality (56·1) among male infants under 3 months old in 1914 is lower than that for any of the other years covered by the table, and that the mortality for females, viz., 46·5, is with one exception (44·4 in 1912) the lowest rate for any year of the period referred to.

It may be seen from the table on the preceding page that more than one-third of the deaths of infants under one year old are attributed to a group—wasting diseases—which includes deaths from prematurity, congenital malformations, want of breast milk, and atrophy, debility, and marasmus. Diarrhœal diseases and gastritis caused an infant mortality rate of 14·23 per 1,000 births registered as compared with 18·21 in the preceding year ; convulsions accounts for 9·77, bronchitis for 7·35, and pneumonia for 5·86 deaths per 1,000 births registered. Among the common infective diseases whooping-cough showed the highest death-rate, viz., 3·32, measles coming next, with a rate of 1·80 deaths per 1,000 births registered. The infant mortality attributable to all forms of tuberculous disease is 2·33 per 1,000 of all births registered in Ireland during the year 1914 as compared with 2·65 in the year 1913.

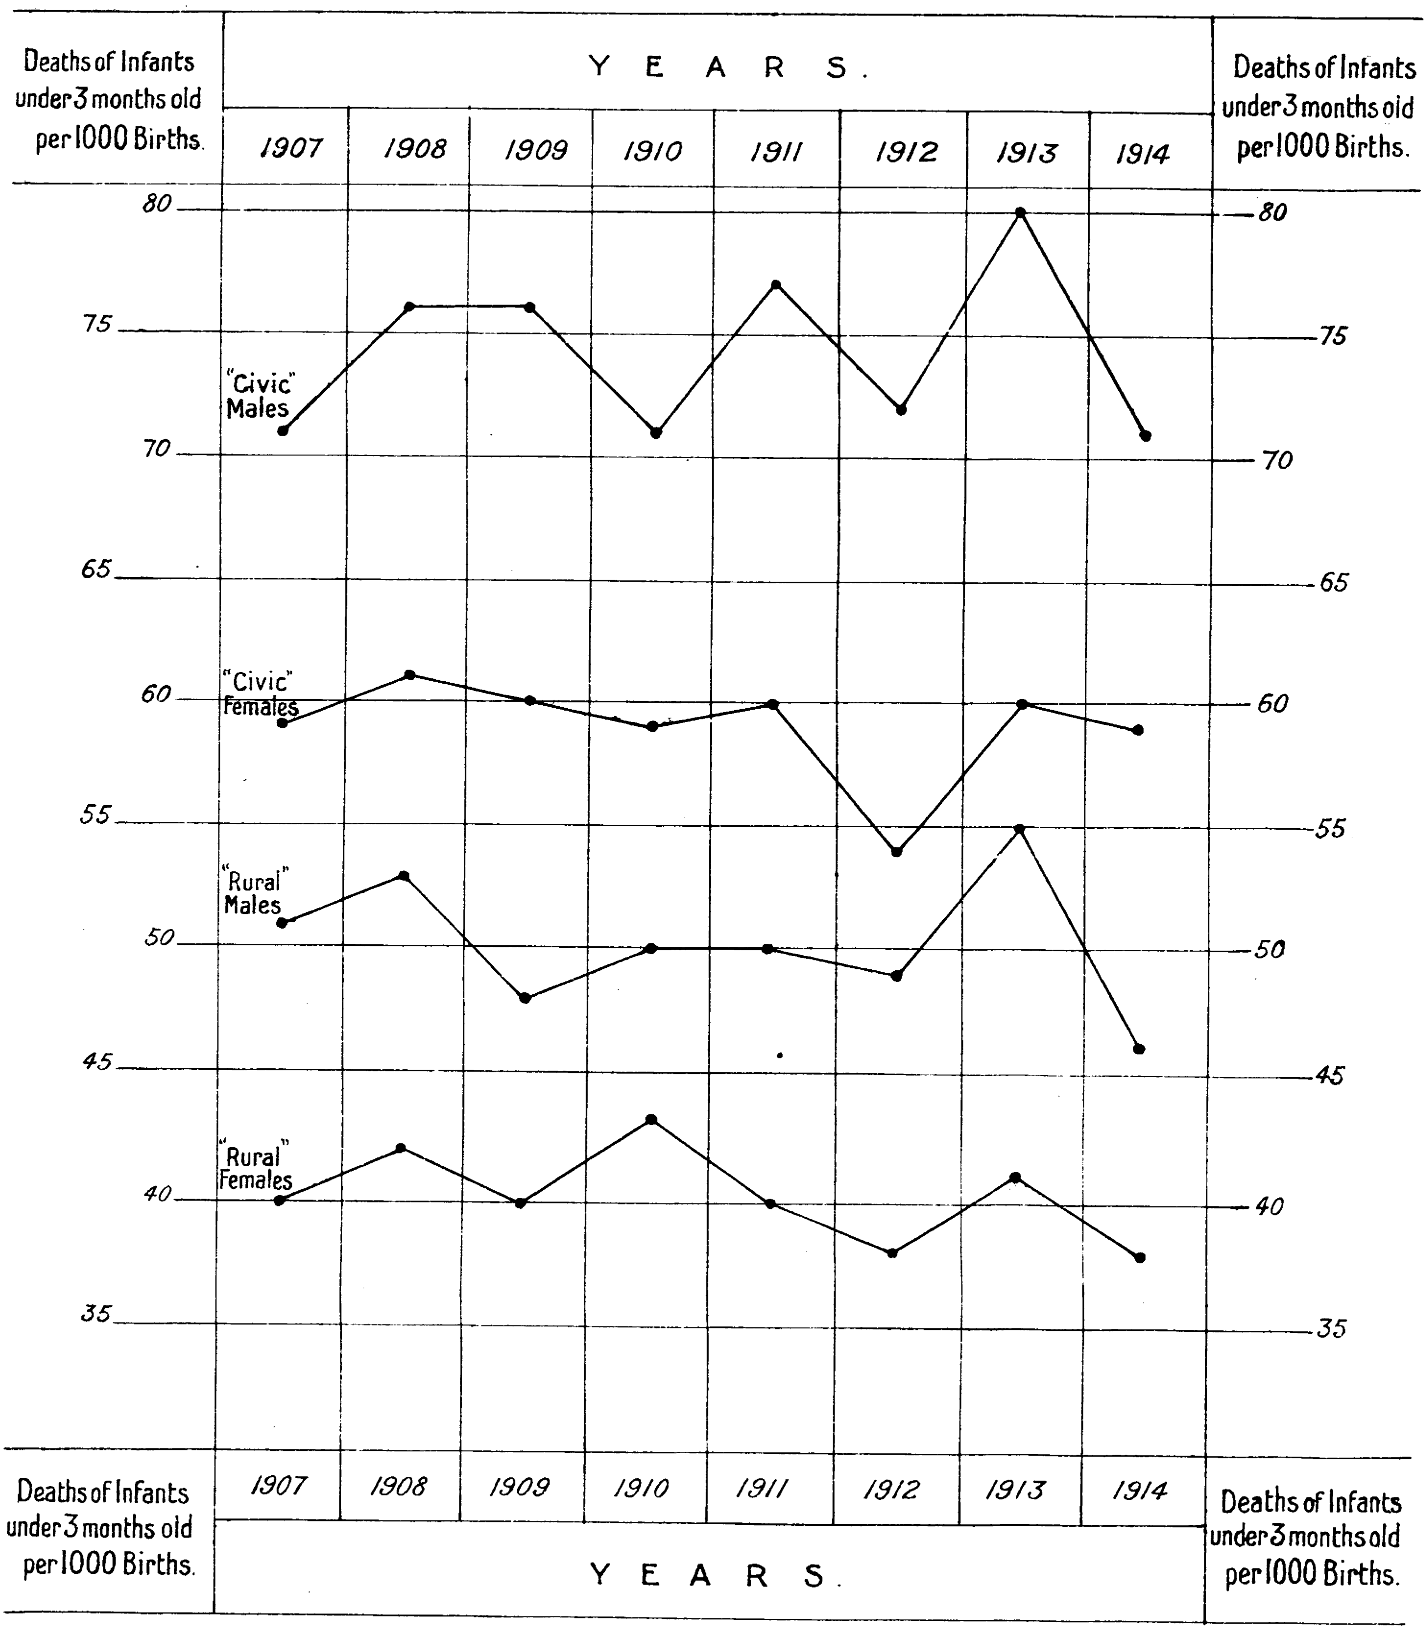
A table on page xliii. gives statistics relating to 27 principal town districts of Ireland, derived from the Yearly Summaries of Weekly Returns furnished by the Registrars for the years 1909 to 1914, inclusive. It will be seen that the infant mortality rate for the year 1914 for these districts in the aggregate was 131 per 1,000 births registered as against 141 in 1913. The highest rate in 1914 was in Newtownards, namely, 147 ; in the Dublin Registration Area, it was 145 ; in Belfast, 143 ; in Lisburn, 143 ; in Waterford, 140 and in Galway, 136. In the following towns the lowest infant mortality rates were recorded :—Clonmel, 56 ; Bray, 61 ; Bangor, 62 ; Coleraine, 63 ; Portadown, 65 ; and Sligo, 71.

EMIGRATION.

According to the returns collected and forwarded to this Department by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, the number of emigrants (natives of Ireland) who left the ports of Ireland during the year 1914 was 20,314, of whom 10,660 were males and 9,654 females. Of the total emigrants, 2,860 were natives of the province of Leinster, 5,652 of Munster, 6,612 of Ulster, and 5,190 of Connaught.

Of the 20,314 emigrants, 7·4 per cent. were under 15 years of age, 86·6 per cent. were between 15 and 35 years old, and 6·0 per cent. were 35 years or upwards.

DIAGRAM No. 7.—Showing the number of Deaths of MALE and FEMALE INFANTS under 3 months old per 1,000 Births registered in the "Civic" and "Rural" Unions of Ireland during each of the 8 years 1907-1914.



N.B.—"Civic" Unions are those Unions containing towns which, in 1911, had a population of 10,000 inhabitants or upwards; "Rural" Unions comprise the remainder of the country.

PRICES OF PROVISIONS, AND PAUPERISM.

The average price of the 4 lb. loaf (1st quality, delivered) in Dublin in the year 1914 was 6*d.*, the average price in the year 1913 being also 6*d.** Oatmeal (1st quality) averaged 16*s.* 1*d.* per cwt. in Dublin, the average price for 1913 being 16*s.*; the average prices of potatoes in Dublin ranged from 3*s.* 0*d.* to 3*s.* 8*d.* per cwt., as against 4*s.* 1*d.* to 4*s.* 6*d.* in 1913; and those of beef from 48*s.* 0*d.* to 66*s.* 0*d.* per cwt., as compared with 51*s.* 6*d.* to 66*s.* 6*d.* in 1913.

TABLE XVII.—AVERAGE PRICES in DUBLIN OF BREAD, OATMEAL, POTATOES, and BEEF, during the years 1904–1914, and the AVERAGE NUMBER OF PERSONS IN IRELAND receiving IN-DOOR and OUT-DOOR RELIEF on Saturdays in those years; also the AVERAGE PRICES of PROVISIONS, and the AVERAGE NUMBER OF PERSONS in RECEIPT OF RELIEF during each quarter of the year 1914.

*Prices derived from returns received from Messrs. Bolands, Limited, and Messrs. Johnston, Mooney and O'Brien, Limited.

†Compiled from Returns furnished by the Local Government Board.

‡Not including those relieved by means of works devised for the relief of distress, viz.:—an average of 3,180 in First Quarter, 13,656 in Second Quarter and 2,048 in Third Quarter of 1905, and an average of 1,062 in First Quarter, 7,199 in Second Quarter, and 2,645 in Third Quarter of 1908.

It would appear from the foregoing table that in the years 1905 and 1914 the prices of beef were lowest, when the average ranged from 48*s.* 6*d.* to 54*s.* 6*d.*, and from 48*s.* 0*d.* to 66*s.* 0*d.* per cwt., respectively; in the year 1906 bread was cheapest, when the average price (1st quality delivered) was 5½*d.* per 4 lb. loaf. Oatmeal (1st quality) was cheapest in 1911, in which year the average price was 13*s.* 8*d.* per cwt.; and potatoes in 1905, when the average range of prices was from 2*s.* 7*d.* to 3*s.* 2*d.* per cwt. The highest price of bread was in the year 1912, when the 4 lb. loaf averaged 6½*d.*, and in the year 1914 the price of oatmeal was highest, viz., 16*s.* 1*d.* per cwt. The highest rates for potatoes were from 4*s.* 1*d.* to 4*s.* 6*d.* per cwt. in 1913, and 4*s.* to 4*s.* 6*d.* in 1907, and for beef from 57*s.* 6*d.* to 64*s.* 6*d.* per cwt. in 1912.

I have been favoured by the Commissioners of the Local Government Board for Ireland with the returns embodied in this Report relating to Pauperism in Ireland, for which I desire to express my obligations. It would appear from these returns (see Table XVII.) that the average number of workhouse inmates in Ireland on Saturdays during the year 1914 was 35,340, being 1,242 below the average for the preceding year; and that the average number of persons receiving out-door relief was 37,809, or 629 below the corresponding number for 1913.

THE WEATHER.

The information given on pages 151-163 is presented, as heretofore, through the kind permission of the Editors of the "Dublin Journal of Medical Science," having been extracted from returns of Meteorological Observations taken in the City of Dublin by Sir John W. Moore, M.A., M.D., D.P.H., DUB.; D.SC., OXON.; F.R.C.P.I., F.R.MET. SOC., D.L. Hon. Physician in Ordinary to His Majesty the King in Ireland; and published in the monthly editions of the Journal from March, 1914, to February, 1915. The comparative tables on pages 163-164 have also been compiled from Sir John Moore's observations.

The mean Atmospherical Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the daily maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A *rainy day* is one on which at least ·01 inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The *Mean Height of the Barometer* during the year 1914 was 29·885 inches. The highest observed reading was 30·651 inches at 9 A.M. on January 1st. The lowest observed reading was 28·047 inches, at 9 A.M. on February 22nd. The extreme range of atmospherical pressure was 2·604 inches, as compared with 2·026 inches in 1913.

The *Mean Temperature* of the air for the year was 50·6°. The highest reading was 76·0° on June 30th, and the lowest reading was 22·9° on December 22nd. The average mean temperature for the years 1894-1913, was 50·1°.

Rain fell on 198 days, including snow or sleet on 10 days and hail on 23 days. The average annual number of rainy days in the years 1894-1913, was 200·7. The total rainfall measured 26·518 inches, compared with an average of 27·814 inches in the twenty years, 1894-1913. During the first half of 1914 (January to June, inclusive) the rainfall was 9·010 inches on 94 days; during the second half (July to December, inclusive) 17·508 inches fell on 104 days.

I have the honour to be,

Your Excellency's faithful Servant,

WILLIAM J. THOMPSON,
Registrar-General.

GENERAL REGISTER OFFICE,
CHARLEMONT HOUSE
DUBLIN, 30*th June*, 1915.

NOTE.—The Registrars' Districts are subdivisions of the Unions or Superintendent Registrars' Districts, and are identical with the Dispensary Districts of the same names, except in a few instances. See note (*), page 3.

The letter *W*. denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.

Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the Deaths* to the extent stated.

BIRTHS AND DEATHS Registered in the Year 1914—REGISTRARS' DISTRICTS arranged by COUNTIES and SUPERINTENDENT REGISTRARS' DISTRICTS.—*continued.*

NOTE.—This Table has been constructed for the years 1840 and 1841—By adopting the rate of increase between the population of 1831 and 1841, according to the Irish Census Report of 1841.

1842 to 1846—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871—The English birth and death-rates, as above, were used, deducting the number of emigrants, according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861 and 1871, as explained for the last period.

1872 to 1914—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1872–81, 1882–91, 1892–1901, and 1902–1911, to allow for the discrepancy between the number thus arrived at for 1881, 1891, 1901, and 1911, respectively, and the population as shown by the Census in each of these years.

AGES of the POPULATION IN IRELAND according to the Census Returns of 1861, 1871, 1881, 1891, 1901, and 1911.

Periods.	Sexes.	Ages—Years.														Total.
		Under 1.	1 and under 5.	5 and under 10.	10 and under 15.	15 and under 20.	20 and under 25.	25 and under 35.	35 and under 45.	45 and under 55.	55 and under 65.	65 and under 75.	75 and under 85.	85 and under 95.	95 and upwards.

* In 3,838 instances in 1861—2,453 males, and 1,385 females; in 3,769 instances in 1871, viz., 2,176 males, and 1,593 females; in 2,996 instances in 1881, viz., 1,765 males, and 1,231 females; and in 1,786 instances in 1891, viz., 852 males, and 934 females, the age was not stated in the Returns.

METEOROLOGICAL OBSERVATIONS

FOR EACH MONTH OF THE YEAR 1914.

BY SIR JOHN W. MOORE, Honorary Physician in Ordinary to His Majesty the King in Ireland, B.A., M.D., DUBL.; D.SC., OXON.; F.R.C.P.I.; F.R.MET. SOC.

(Extracted from the *Dublin Journal of Medical Science*).

JANUARY.—As usual, January presented alternate periods of cold and warmth, but in Ireland the mean temperature for the whole month was somewhat above the average, while the rainfall was in defect. At the beginning an anticyclone, in which the barometer touched 30·72 inches at Roche's Point, Co. Cork, on the morning of New Year's Day, hovered off the south coast of Ireland. The year opened with frost in many parts of Ireland and England. At 7 a.m. of the 1st the thermometer read 22° at Nottingham, 25° at Bath, 28° at Kew and Dungeness, 30° at Dover, 31° at Birr, and 32° at Donaghadee. But a thaw was already in progress in most parts of the Kingdom, and it became general by the morning of the 2nd. Between the 3rd and the 5th a large and deep depression passed in a south-easterly direction from Greenland across Ireland and the Norwegian Sea to Denmark, causing unsettled stormy weather in all districts. It was quickly followed between the 7th and the 9th by a similar disturbance which reached the Baltic on the morning of the latter day. In the wake of this depression the barometer rose rapidly to 30·69 inches at Hernösand, in Sweden, on the morning of the 10th. As a result a violent N. W. & N. storm swept over Germany, accompanied by heavy falls of rain and snow. This in turn was followed by an intense and abiding frost, which extended to France and the Peninsula. Throughout the week ended on the 17th the weather in the British Isles was influenced by a large anticyclone which advanced from Northern Europe and which was originally of great intensity. On the morning of Monday, the 12th, the barometer rose to 30·90 inches at Karlstad in Central Sweden. Fresh E. and S.E. winds prevailed, the sky was densely clouded so that radiation was checked, little variation in temperature occurring between day and night. A temporary break took place on the 17th, and during that day and the following night rain and hail fell abundantly in Dublin to the amount of ·197 inch. During the earlier part of the next week also (18th-21st, inclusive) the anticyclone maintained its position, but it thenceforward retreated southeastwards to the Continent, while a large area of low pressure spread over Ireland and Scotland from the Atlantic. The weather now became mild, but very unsettled and ultimately stormy from S.W., for depression after depression swept rapidly past the Irish and Scottish coasts in a north-easterly direction as secondaries to deep primary cyclonic systems travelling along the Arctic Circle in the far N.

In Dublin the arithmetical mean temperature (42·6°) was above the average (41·7°) by 0·9°; the mean dry-bulb readings at 9 a.m. and 9 p.m. were 42·3°. In the forty-nine years ending with 1914, January was coldest in 1881 (M. T. = 33·2°), and warmest in 1898 (M. T. = 47·8°). In 1913 the M. T. was 43·4°.

The mean height of the barometer was 30·102 inches, or 0·228 inch above the corrected average value for January—namely, 29·874 inches. The mercury rose to 30·651 inches at 9. a.m. of the 1st, and fell to 29·419 inches at 1 p.m. of the 31st. The observed range of atmospheric pressure was, therefore, 1·232 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 42·3°, or 0·3° below the value for January, 1913. The mean maximal air-temperature was 46·4°; the mean minimum was 38·8°. Using the formula, *Mean Temp.* = *Min.* + (*Max.* — *Min.*) × ·52, the M. T. becomes 42·8°, compared with a thirty-five years' (1871-1905) average of 41·9°. The arithmetical mean of the maximal and minimal readings was 42·6°, compared with a thirty-five years' average of 41·7°. On the 9th and 31st the thermometer in the screen rose to 56·0°—wind, S.W.; on the 1st the temperature fell to 28·0°—wind, W.N.W. The minimum on the grass was 25·4° on the 1st.

The rainfall was 1·002 inch distributed over 12 days. Of this amount ·197 inch fell on the 17th. The average rainfall for January in the thirty-five years, 1871-1905, inclusive, was 2·210 inches, and the average number of rain-days was 18. The rainfall, therefore, and the rain-days were much below the average. The record rainfall for January was in 1895—namely, 5·711 inches on 24 days. In 1876, only ·406 inch was measured on but 9 days. In 1907, only·428 inch fell on but 9 days. In 1911, only ·638 inch fell on 10 days, but in 1912, 3·510 inches fell on 19 days, and in 1913, 5·576 inches on 21 days.

The atmosphere was foggy on the 17th, 18th and 29th. High winds were noted on 7 days, and reached the force of a gale on the 4th, 25th, 30th, and 31st. Snow fell on the 5th, hail on the 17th. A lunar corona was seen on the 7th. Temperature reached or exceeded 50° in the screen on 9 days; while it fell to 32° in the screen on 2 nights. The grass minimum was 32° or less on 3 nights. On the 21st the maximal temperature in the screen was 37·9°. Lightning was seen on the evening of the 5th.

At the Normal Climatological station in Trinity College, Dublin, Mr. C. D. Clark reports that the mean height of the barometer was 30·097 inches, the range of atmospheric pressure being from 30·64 inches at 9 p.m. of the 1st to 29·50 inches at 9 a.m. of the 31st. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 43·2°. The arithmetical mean of the daily maximal and minimal temperatures was 42·7°. The screened thermometers rose to 57° on the 8th and 9th, and fell to 26° on the 1st. On the 1st the grass minimum was 19°. Rain fell on 11 days to the amount of ·956 inch, the greatest fall in 24 hours being ·164 inch on the 31st. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 14·2 hours, of which 5·2 hours occurred on the 26th. The mean daily sunshine was 0·5 hour. The mean temperature of the soil at 9 a.m. was 41·5° at a depth of 1 foot; at a depth of 4 feet it was 44·4°.

FEBRUARY.—An open, windy, rainy month. The centres of a series of large cyclonic disturbances moved in a general north-easterly direction during the first week over the Icelandic region and the adjoining parts of the Atlantic, during the second and third weeks across the Atlantic between Iceland and the British Isles; and finally, on the 22nd and 23rd, a cyclone in which the barometer fell to 28·047 inches in Dublin at 9 a.m. of the 22nd, passed in a northerly direction up St. George's Channel and across the Irish Sea and North Channel to the Hebrides, and finally to the Faeroe. On very few days—and these mostly towards the close of the month—did the wind fail to attain gale force on the British and Irish coasts, and at 8 a.m. of the 22nd Lyons reported a wind velocity of 40 metres per second, or 89·5 miles per hour, from the southward. This incident coincided closely with the presence near Dublin of a cyclonic centre in which the barometer, as already stated, fell to 28·047 inches. This was the lowest reading recorded in this city since December 8th, 1886, when the memorable observation of 27·758 inches was made at 2.30 p.m. On that day the minimum recorded at the Observatory of the Ordnance Survey Office, Phœnix Park, was 27·766 inches, being the lowest reading noted at that station since the year 1829. On November 28th, 1838, the barometer fell to 27·769 inches at the Ordnance Survey Office at 8 p.m. From the above statements, it will be seen that the low reading of 28·047 inches does not come within a quarter of an inch of the low atmospheric pressures in 1829, 1838, and 1886. The nearest approach to it was the extremely low reading of 28·077 inches in Dublin on March 15th, 1905, nearly nine years ago. In the cyclonic system of the 22nd the wind shifted to E. and blew freshly. There had been a S.E. gale in the night, and rain fell to the amount of ·462 inch in Dublin and of ·670 inch at Fassaroe, near Bray, Co. Wicklow. In the course of the day the wind backed through N.E. to N., and finally to W. The closing days of the month, though still changeable, were quieter and a slight frost occurred on the 24th.

In Dublin the mean temperature (46·0°) was 3·6° above the average (42·4°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 44·9°. In the forty-nine years ending with 1914, February was coldest in 1895 (M. T. = 34·2°), and warmest in 1903 (M. T. = 47·5°). In 1913 the mean temperature was 43·4°.

The mean height of the barometer was only 29·501 inches, or 0·354 inch below the average value for February—namely, 29·855 inches. The mercury rose to 30·041 inches at 9 p.m. of the 27th and fell to 28·047 inches at 9 a.m. of the 22nd. The observed range of atmospheric pressure was, therefore, 1·994 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 44·9°, or 2·6° above the value for January, 1914. Using the formula *Mean Temp.* = *Min.* + (*Max.* - *Min.*) × ·50, the M. T. is 46·0°, compared with a thirty-five years' (1871-1905) average of 42·4°. On the 3rd the thermometer in the screen rose to 58·0°—wind, S.W.; on the 24th it fell to 32·6°—wind, calm. The minimum on the grass was 30·1° on the 24th.

The rainfall was 2·479 inches, distributed over 19 days. The average rainfall for February in the thirty-five years, 1871-1905, inclusive, was 2·010 inches, and the average number of rain-days was 15. The rainfall, therefore, and also the rain-days were in excess of the average. In 1883 the rainfall in February was large—3·752 inches on 17 days; in 1879 also 3·706 inches fell on 23 days. On the other hand, in 1891, only ·042 inch was measured on but 2 days. In 1913, only ·602 inch fell on 12 days.

Fog occurred on the 24th. The amount of cloud—56·5 per cent.—was under the average—66 per cent. High winds were noted on 17 days, and reached the force of a gale on the 8th, 11th and 22nd. Sleet fell on the 22nd.

The temperature reached or exceeded 50° in the screen on 16 days, and never fell to 32° in the screen. The minima on the grass were 32° or less on only 2 nights, compared with every night in 1895. The thermometer failed to rise above 44·0° in the screen in the daytime on the 22nd. The highest minimum was 53·0° on the 2nd. The mean maximum was 51·2°, the mean minimum was 40·7°.

In Dublin the rainfall up to February 28th amounted to 3·481 inches on 31 days, compared with 6·178 inches on 33 days in 1913, and a thirty-five years' (1871-1905) average of 4·220 inches on 33 days.

At the Normal Climatological Station in Trinity College, Dublin, Mr. S. A. Clark reports that the mean height of the barometer was 29·501 inches. The range of atmospheric pressure was between 30·02 inches at 9 p.m. of the 16th and 28·03 inches at 9 a.m. of the 22nd. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 46·0°. The arithmetical mean of the daily maximal and minimal temperatures was 45·8°. The screened thermometers rose to 59·0° on the 3rd, and fell to 29·0° on the 24th. On the 24th the grass minimum was 21·0°. Rain fell on 15 days to the amount of 2·336 inches, the greatest fall in 24 hours being ·496 inch on the 21st. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 67·0 hours, of which 8·2 hours occurred on the 27th. The mean daily duration of bright sunshine was 2·4 hours. The mean earth temperatures were—at 1ft., 44·1°; at 4 ft., 45·4°.

March.—March, 1914, closely resembled March, 1913, which was described as "an unsettled, windy month, of medium temperature, frequent although not heavy rains, and preponderating westerly and south-westerly winds." In the present year, the mean temperature of the month was slightly above the average, but curiously enough it fell short of the mean temperature of February by some 2 degrees, thus showing a remarkable relapse to winterly conditions. Throughout the month the British Isles lay in the track of successive low pressure systems advancing from the Atlantic, and most of these disturbances passed with their centres north of the parallel of 54 degrees N. A notable exception was a cyclonic depression which travelled up the English Channel and across the south-east of England to the North Sea on the 20th and 21st. In that disturbance the barometer fell to 28·6 inches, and easterly to northerly winds and heavy falls of cold rain, hail, sleet and snow prevailed in the south and east of England. Temperature was low in Ireland, especially during the second, third and fourth weeks of the month; but the last three days were quite spring-like in their mildness, and went far to restore the balance of the mean temperature of the month.

In Dublin the arithmetical mean temperature (44·1°) was 0·4° above the average (43·7°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 42·7°. In the forty-nine years ending with 1913, March was coldest in 1867 and 1883 (M.T. = 39·0°), and warmest in 1903 (M.T. = 48·1°). In 1913 the M.T. was 43·8°.

The mean height of the barometer was 29·564 inches, or 0·352 inch below the corrected average value for March—namely, 29·916 inches. The mercury rose to 30·079 inches at 9 p.m. of the 2nd and fell to 28·922 inches at 4 p.m. of the 25th. The observed range of atmospheric pressure was, therefore, 1·157 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 42·7°. Using the formula, *Mean Temp.* = *Min.* + (*Max.* – *Min.*) × ·485, the M.T. becomes 43·9°. The arithmetical mean of the maximal and minimal readings was 44·1°, compared with a thirty-five years' (1871-1905) average of 43·7°. The mean maximum was 49·9°; the mean minimum, 38·2°. On the 31st the thermometer in the screen rose to 59·0°—wind, S.S.W.; on the 20th it fell to 29·8°—wind, N.W. The minimum on the grass was 27·7°, also on the 20th.

The rainfall was 2·104 inches, distributed over 26 days. The average rainfall for March in the thirty-five years, 1871–1905, inclusive, was 1·910 inches, and the average number of rain-days was 17. The rainfall, therefore, and especially the rain-days, were above the average. In 1867 the rainfall in March was very large—4·972 inches on 22 days. On the other hand, the smallest March rainfall was ·288 inch on 8 days in 1893. In 1913, the rainfall was 2·155 inches on 22 days.

High winds were noted on 14 days, and reached the force of a fresh gale on the 6th, 14th, and 16th. A solar halo appeared on the 7th, 17th and 23rd. There was a lunar halo on the 8th, and a lunar corona on the night of the 9th. Hail fell on the 1st, 9th, 10th, 16th, 19th, and 22nd; sleet or snow on the 9th, 10th, 17th and 19th. The lowest daily maximum temperature was 41·8° on the 19th. The highest daily minimum was 47·2° on the 31st.

The rainfall in Dublin during the three months ending March 31st amounted to 5·585 inches on 57 days, compared with 3·292 inches on 44 days in 1911, 8·799 inches on 61 days in 1912, 8·333 inches on 55 days in 1913, and a thirty-five years' (1871-1905 inclusive) average of 6·130 inches on 50·0 days.

At the Normal Climatological Station in Trinity College, Dublin, Mr. S. A. Clarke reports that the mean height of the barometer was 29·561 inches. The range of atmospheric pressure was between 30·07 inches at 9 p.m. of the 2nd and 28·98 inches at 9 a.m. of the 20th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 44·0°. The arithmetical mean of the daily maximal and minimal temperatures was 43·8°. The screened thermometers rose to 61·2° on the 31st, and fell to 28·0° on the 25th. On the 25th the grass minimum was 21·0°. Rain fell on 19 days to the amount of 1·951 inches, the greatest fall in 24 hours being ·197 inch on the 15th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 110·2 hours, of which 8·2 hours occurred on the 22nd. The mean daily duration of bright sunshine was 3·6 hours, compared with only 2·4 hours in March, 1913. The mean earth temperatures were—at 1ft., 44·0°; at 4ft., 45·3°.

April.—April, 1914, may be described as a very favourable spring-like month. Until the 13th it proved true to its traditional character as the month of showers and sunshine. From that date onward to the close it was remarkably fine and bright, as well as abnormally dry. In the earlier and changeable period the barometer was generally low on the Atlantic between Iceland and the British Isles, and accordingly fresh to strong S.W. and W. winds prevailed, and showers fell at frequent intervals, chiefly in the afternoons. This was especially the case in the second week, during the opening days of which the barometer remained as low as 28·80 inches off the North of Scotland, while secondary shallower depressions passed eastwards across Ireland and England. On the 6th the wind attained gale force in Dublin, and hail showers fell in this city on that and the following four days. On the 13th a large anticyclone spread in over Ireland from the Atlantic, and this system developed much energy and great staying power. The wind fell light or shifted to easterly points of the compass, with an unusual absence of cloud. The result was a very pronounced diurnal range of temperature—examples as, on the 20th the screened thermometer rose at Bath to 72° and fell to 37° during the following night—a range of 35° in a few hours; on the 16th, at Birr Castle, the range was from 35° to 63°, on the 17th at Nairn, the minimum was 35°, the maximum was 70°. Even in Dublin, on the sea coast, the range on the 15th was from 37° to 58°. In the closing days of the month the British Isles came again under the influence of a large anticyclone. At Killarney the thermometer rose to 72° in the screen on the 20th and 21st and the mean temperature of the four weeks ended the 25th was 4·6° above the average.

In Dublin the arithmetical mean temperature (50·4°) was 2·8° over the average (47·6°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 48·9°. In the forty-nine years ending with 1913, April was coldest in 1879 (the cold year) (M. T. = 44·5°), and warmest in 1893 (M. T. = 51·4°) In 1912 the M. T. was 49·5°.

The mean height of the barometer was 30·035 inches, or 0·185 inch above the average value for April—namely, 29·850 inches. The mercury rose to 30·615 inches at 9 a.m. of the 26th, and fell to 29·212 inches at 4 p.m. of the 7th. The observed range of atmospheric pressure was, therefore, 1·403 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 48·9°, or 3·5° above the value for March, 1914. Using the formula, *Mean Temp.* = *Min.* + (*Max.* – *Min.*) × ·476, the value is 50·0°, or 2·7° in excess of the average mean temperature for April, calculated in the same way, in the thirty-five years, 1871-1905 (47·3°). The arithmetical mean of the maximal and minimal readings was 50·4°, compared with a thirty-five years' (1871-1905) average of 47·6°. On the 21st the thermometer in the screen rose to 68·0°—wind, S.W.; on the 16th the temperature fell to 36·9°—wind, E. The minimum on the grass was 34·8° on the 16th. The mean maximal temperature was 57·5°, the mean minimum was 43·2°.

The rainfall was ·719 inch, distributed over 11 days, all of them before the 14th. The average rainfall for April in the thirty-five years, 1871-1905, was 1·940 inches, and the average number of rain-days was 16. The rainfall, therefore, and also the rain-days were considerably below the average. In 1877 the rainfall in April was very large—4·707 inches on 21 days. On the other hand, in 1873, only ·498 was measured on 8 days. In 1913, 2·764 inches fell on 19 days.

High winds were noted on 10 days, but reached the force of a gale only on the 6th. Hail fell on the 6th and following four days. The temperature rose to 60° in the screen on 8 days. It just failed to reach 50° on the 8th. It never fell to 32° in the screen or even on the grass. The mean lowest temperature on the grass was 40·8°, compared with 38·4° in 1913, 39·7° in 1912, 40·2° in 1911, 36·0° in 1910, 39·0° in 1909, 35·4° in 1908, 36·7° in 1907, 33·6° in 1906, 37·3° in 1905, 39·1° in 1904, 37·0° in 1903, 36·8° in 1902, 37·3° in 1901, and only 31·6° in 1887.

The rainfall in Dublin during the four months ending April 30th amounted to 6·304 inches on 68 days, compared with only 4·700 inches on 59 days in 1911, 10·119 inches on 68 days in 1912, 11·097 inches on 74 days in 1913, an average of 8·338 inches on 69 days in the first decade of the twentieth century, and a thirty-five years' (1871-1905) average of 8·070 inches on 66 days.

At the Normal Climatological station in Trinity College, Dublin, Mr. S. A. Clark reports that the mean height of the barometer was 30·021 inches, the range of atmospheric pressure being from 30·56 inches at 9 p.m. of the 25th and 9 a.m. of the 26th to 29·27 inches at 9 a.m. of the 7th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 49·9°. The arithmetical mean of the daily maximal and minimal temperatures was 48·5°. The screened thermometers rose to 69° on the 21st, and fell to 32·7° on the 7th. On the 15th, 16th and 17th the grass minimum was 30·0°. Rain fell on 9 days to the amount of ·757 inch, the greatest fall in 24 hours being ·20 inch on the 3rd. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 196·1 hours, of which 11·4 hours occurred on the 17th. The mean daily duration of sunshine was 6·5 hours. The mean temperature of the soil at 9 a.m. was 49·2° at a depth of 1 foot; at a depth of 4 feet it was 47·7°.

MAY.—May, 1914, may be described as a favourable and seasonable month, in the course of which alternate periods of very cold and comparatively warm weather occurred. The drought which began on April 13th drew to a close on the afternoon of Sunday, May 3rd, a heavy shower falling at 4.40 p.m. of that day. This was followed by a series of cloudy, squally, showery days, culminating in a spell of severe cold for the time of year—the mean temperature of the 8th and 9th conjointly was 44·3°. Friday, the 8th, was very inclement in the Dublin district, heavy showers of rain and hail being borne on the wings of a fresh gale from N.W.

Towards the end of the second week the weather had become generally fine and bright—warm in the daytime, but nowhere hot. An anticyclone, which had extended to Ireland from the Azores on the 10th, subsequently stretched eastwards across the United Kingdom. This system was accompanied by fair, dry weather.

During the week ended Saturday, the 23rd, very favourable and seasonably warm weather was enjoyed. This depended on the persistence of a ridge of high pressure extending in a north-easterly direction from the neighbourhood of the Azores across Ireland and England to Denmark and the Baltic. Wednesday, the 20th, was a fair summer's day—especially warm in England, the thermometer rising to 76° at some London stations. Rain fell heavily in the Dublin district on the night of the 22nd.

A spell of very cold weather ushered in the last week. On Wednesday, the 27th, however, conditions became more seasonable, although nothing like warm summer weather can be said to have occurred at any time, except on Thursday, the 28th, when the thermometer rose to 67° in Dublin and at Birr Castle. The night of the 24th-25th was exceptionally cold—in Dublin city the thermometer fell to 36°; at Birr Castle the minimum was 29°, and Nairn, in Scotland, reported 26°. The frosts at this time did great damage to vegetation in many parts of the British Isles.

In Dublin the arithmetical mean temperature (52·4°) was 0·2° above the average (52·2°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 51·5°. In the forty-nine years ending with 1913, May was coldest in 1869 (M. T. = 48·2°), and warmest in 1893 (M. T. = 56·7°). In 1911 the M. T. was 55·3°, in 1912, 53·5°, and in 1913, 52·3°.

The mean height of the barometer was 30·111 inches, or 0·122 inch above the corrected average value for May—namely, 29·989 inches. The mercury rose to 30·486 inches at 9 a.m. of the 19th, and fell to 29·320 inches at midnight of the 6th. The observed range of atmospheric pressure was, therefore, 1·166 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 51·5°, or 2·6° above the value for April, 1914—48·9°. Using the formula $Mean\ Temp. = Min. + (Max. - Min.) \times \cdot 47$, the value is 52·0°, or 0·2° above the average mean temperature for May, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (51·8°). The arithmetical mean of the maximal and minimal readings was 52·4°, compared with a thirty-five years' average of 52·2°. On the 17th the thermometer in the screen rose to 68·8°—wind, N.; on the 25th the temperature fell to 35·5°—wind, N. The minimum on the grass was 33·8° on the 25th.

The rainfall amounted to 1·828 inches, distributed over 17 days. The average rainfall for May in the thirty-five years, 1871-1905, inclusive, was 1·970 inches, and the average number of rain-days was 15. The rainfall therefore was slightly below the average, while the rain-days were slightly above it. In 1886 the rainfall in May was very large—5·472 inches on 21 days; in 1869, also 5·414 inches fell on 19 days. On the other hand, in 1895, only ·177 inch was measured on but 3 days. In 1896 the fall was only ·190 on 7 days. In 1911, 1·286 inches fell on 10 days; in 1912, 1·042 inches on 19 days; and in 1913, 2·802 inches on 17 days.

Solar halos appeared on the 2nd, 9th, 17th, and 28th. High winds were noted on 6 days, including a gale on the 8th. Hail fell on the 5th, 8th, 11th, and 24th. There was a fog on the 15th.

The mean minimal temperature on the grass was 44·5°, compared with 45·5° in 1913, 44·5° in 1912, 46·2° in 1911, 42·0° in 1910, 41·9° in 1909, 45·2° in 1908, 41·6° in 1907, 41·9° in 1906, 42·5° in 1905, and 37·6° in 1894. The maximum fell short of 50° on the 9th (48·9°). The highest daily minimum was 54·3° on the 21st. The mean maximum was 58·6°, the mean minimum was 46·1°.

The rainfall in Dublin during the five months ended May 31st amounted to 8·132 inches on 85 days, compared with 13·899 inches on 91 days in 1913, 11·161 inches on 87 days in 1912, 5·986 inches on 69 days in 1911, 12·421 inches on 92 days in 1910, 10·098 inches on 75 days in 1909, 10·078 inches on 95 days in 1908, 9·499 inches on 81 days in 1907, 11·592 inches on 97 days in 1906, 9·026 inches on 81 days in 1905, 11·741 inches on 92 days in 1904, 12·560 inches on 95 days in 1903, 9·973 inches on 81 days in 1902, 7·724 inches on 67 days in 1901, only 5·971 inches on 70 days in 1896, and a thirty-five years' average of 10·040 inches on 81 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. Sidney A. Clark, returns the mean height of the barometer as 30·103 inches, the highest reading observed being 30·45 inches at 9 a.m. of the 19th, the lowest, 29·41 inches, at 9 a.m. of the 7th. The arithmetical mean temperature was 51·8°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 52·2°. Rain fell on 12 days to the amount of 1·619 inches, ·390 inch being measured on the 22nd. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 144·1, giving a daily average of 4·7 hours. The corresponding figures for May, 1904, were 192·5 hours and 6·2 hours; for 1905, 215·7 hours and 7·0 hours; for 1906, 132·5 hours and 4·3 hours; for 1907, 173·0 hours and 5·6 hours; for 1908, 193·9 hours and 6·3 hours; for 1909, 231·5 hours and 7·5 hours; for 1910, 175·5 hours and 5·7 hours; for 1911, 214·0 hours and 6·9 hours; for 1912, 157·8 hours and 5·1 hours; and for 1913, 189·7 hours and 6·1 hours respectively. The mean earth-temperature at 9 a.m. was 53·6° at a depth of one foot below the surface, 51·1° at 4 feet. The lowest temperature on the grass (terrestrial radiation) was 29·0° on the 25th. The highest temperature in the shade was 70·0° on the 16th; the lowest was 34·0° on the 25th.

JUNE.—In Ireland, June 1914 proved a generally fine, dry month. The first half was distinctly cool, but the last few days were exceptionally warm. An outstanding feature of the month's meteorology was a marked preponderance of winds from polar quarters—that is, from points of the compass between N.W. and N.E. On the east coast of Ireland, also, easterly sea breezes during the daytime were often observed. The general distribution of atmospheric pressure was anticyclonic—a tongue of high barometer stretching from the Azores north-eastwards across the Atlantic to the British Isles, and even to Scandinavia.

At the very beginning of the month, however, a V-shaped depression passed eastwards across Scotland, and sharp northerly winds followed in its train, causing the thermometer to fall to points between 33° and 38° at many English and Scottish stations on the early morning of the 3rd. In the second week also a depression passed south-eastwards from the north of Scotland to the Continent, causing strong northerly winds and local thunderstorms in many parts of Great Britain. The third week (14th-20th) was remarkable for violent thunderstorms with abnormally heavy rain locally, and for an extensive prevalence of fog on the British and Irish coasts. In a disastrous thunderstorm which visited the south of London on the afternoon of Sunday, the 14th, the rainfall was 1·89 inches at Wandsworth Common (where 7 lives were lost by lightning), and 3·7 inches in Richmond Park—the latter measurement within $2\frac{3}{4}$ hours. The last

10 days of the month were chiefly fine and summerlike, and from the 27th the thermometer rose daily to 80° or upwards at several of the London stations, the highest reading of all being 89° on the 30th at Camden Square and in St. James's Park. In Dublin 76° was reached on the 30th, the minimum on that day having been 62°.

In Dublin the arithmetical mean temperature (58·4°) was above the average (57·9°) by 0·5°; the mean dry-bulb readings at 9 a.m. and 9 p.m. were 57·4°. In the forty-nine years ending with 1914, June was coldest in 1909 (M. T. = 54·8°), 1907 (M. T. = 55·4°), 1882 (M. T. = 55·8°), and 1879 ("the cold year") (M. T. = 55·9°). It was warmest in 1887 (M. T. = 62·3°), 1896 (M. T. = 61·4°), and 1899 (M. T. = 61·3°). June 1909, established a record for coldness. In 1913 the M.T. was 57·1°.

The mean height of the barometer was 30·105 inches, or 0·188 inch above the corrected average value for June—namely, 29·917 inches. The mercury rose to 30·431 inches at 11 p.m. of the 25th, and fell to 29·738 inches at 9 p.m. of the 7th. The observed range of atmospheric pressure was, therefore, ·693 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 57·4°, or 5·9° above the corresponding M. T. for May, 1914. Using the formula, *Mean Temp.* = *Min.* + (*Max.* − *Min.*) × ·465, the value was 57·9°, or 0·5° above the average mean temperature for June, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (57·4°). The arithmetical mean of the maximal and minimal readings was 58·4°, compared with a thirty-five years' average of 57·9°. On the 30th the thermometer in the screen rose to 76·0°—wind, S.W.; on the 1st the temperature fell to 42·8° —wind, W. The minimum on the grass was 40·9°, also on the 1st. The mean maximum was 65·1°; the mean minimum was 51·6°; the mean grass minimum was 49·6°.

The rainfall was only ·878 inch on 9 days. The average rainfall for June in the thirty-five years, 1871-1905, inclusive, was 1·990 inches, and the average number of rain-days was 15. The rainfall, therefore, and the rain-days were much below the average. In 1878 the rainfall in June was very large—5·058 inches on 19 days; in 1879 also, 4·046 inches fell on 24 days. On the other hand, in 1889, only ·100 inch was measured on 6 days. In 1887 the rainfall was only ·252 inch, distributed over 5 days. June, 1910, established an undisputed record for excessive rainfall in Dublin—the measurement being 6·211 inches on 19 days. In 1912, 2·595 inches fell on 23 days, and in 1913, 1·198 inches on 13 days.

The rainfall in Dublin during the six months ending June 30th amounted to 9·010 inches on 94 days, compared with 15·097 inches on 104 days in 1913, 13·756 inches on 110 days in 1912, 7·729 inches on 80 days in 1911, 18·632 inches on 111 days in 1910, 12·061 inches on 84 days in 1909, 11·729 inches on 107 days in 1908, 12·336 inches on 108 days in 1907, 12·641 inches on 109 days in 1906, only 6·741 inches on 6 days in 1887, and a thirty-five years' average of 12·030 inches on 96 days.

High winds were noted on 8 days, but never reached gale force (8).

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. Sidney A. Clark, reports that the mean height of the barometer was 30·099 inches, the highest reading observed being 30·39 inches at 9 p.m. of the 25th, the lowest, 29·76 inches at 9 p.m. of the 7th. The arithmetical mean temperature was 57·6°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 58·2°. The thermometer rose to 77·1° in the shade on the 30th, and fell to 41·0° on the 8th. The grass minimum was 35·0° on the 11th. Rain fell on 5 days to the amount of ·902 inch, ·314 inch being measured on the 20th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 168·5, giving a daily average of 5·6 hours. The corresponding figures for 1905 were 217·6 hours and 7·3 hours; 1906, 210·3 hours and 7·0 hours; 1907, 129·4 hours and 4·3 hours; 1908, 181·4 hours and 6 hours; 1909, 158·7 hours and 5·3 hours; 1910, 139·9 hours and 4·7 hours; 1911, 190·9 hours and 6·4 hours; 1912, 161·7 hours and 5·4 hours; and 1913, 173·5 hours and 5·8 hours. The mean earth temperature read at 9 a.m. was 58·1° at a depth of one foot below the surface of the ground, 54·2° at a depth of 4 feet.

JULY.—A changeable, cloudy, showery, but withal a very favourable month. The first half yielded some heavy but infrequent rainfalls—·689 inch on the night of the 4th, and ·688 inch on the 8th from midnight to midnight, 1·377 inches or 61·7 per cent. of the rainfall of the whole month. From the 13th to the end, rain fell on 16 out of 19 days, but only to the amount of ·849 inch. In the earlier period shallow atmospheric depressions either lay on the ocean to the westward of Ireland, or spread in over the British Isles. On the 9th a system of relatively and uniformly high pressure developed over North-western Europe, and led to a few days of fine summerlike weather. On Sunday, the 12th, severe thunderstorms visited many parts of England. Shortly afterwards a shallow depression appeared off the west of Ireland, and the weather broke in this country. At first the winds were S.W., but as the depression drifted slowly across the British Isles to the North Sea, the wind veered to N.W., and freshened to a strong breeze or even a gale in the North of Ireland, with clouds, showers, and low temperatures. It was not until the 31st that the approach from the Atlantic of a new depression caused the wind to shift to S.E. and S., clouds and rain attending the change.

The month opened with great heat in England. On the 1st the screened thermometer rose to 85° or a little higher in several places, 89° was recorded at Kew Observatory, Richmond Park, 90° at South Kensington, 92° at the Royal Observatory, Greenwich, and 94° at Camden Square, London, N.W. This heat-wave soon passed, for the maximum on the 3rd exceeded 70° only at Greenwich.

A notable feature in the month also was a spell of tropical heat felt at Haparanda, on the Gulf of Bothnia (lat. 65° 58′ N.), from the 4th to the 12th inclusive, the thermometer rising to 90° at that Arctic Circle station on the 5th.

In Dublin the arithmetical mean temperature (60·0°) was ·5° below the average of the 35 years, 1871-1905 (60·5°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 58·8°. In the forty-nine years ending with 1914, July was coldest in 1879 ("the cold year") (M. T. = 57·2°). It was warmest in 1905 (M. T. = 63·8°); and in 1887 (M. T. = 63·7°). In 1913 the M. T. was 60·5°.

The mean height of the barometer was 29·856 inches, or ·059 inch below the corrected average value for July—namely, 29·915 inches. The mercury rose to 30·196 inches at 9 p.m. of the 9th, and fell to 29·570 inches at 2 a.m. of the 20th. The observed range of atmospheric pressure was, therefore, ·626 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 58·8°, or 1·4° above the value for June, 1914. Using the formula *Mean Temp* = *Min.* + (*Max.* – *Min.*) × ·465, the value was 59·6°, or 0·5 below the average mean temperature for July, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (60·1°) The arithmetical mean of the maximal and minimal readings was 60·0°, compared with a thirty-five years' average of 60·5°. On the 21st the thermometer in the screen rose to 73·8°—wind, N.E.; on the 3rd the screened thermometer fell to 48·3°—wind, N.W. The minimum on the grass was 46·6°, also on the 3rd.

The rainfall was 2·234 inches, distributed over 20 days. The average rainfall for July in the thirty-five years 1871-1905, inclusive, was 2·680 inches, and the average number of rain-days was 17. The rainfall, therefore, was less than the average, whereas the rain-days were 3 above the average. In 1880 the rainfall in July was very large—6·087 inches on 24 days; in 1896, also, 5·474 inches fell on 18 days. On the other hand, in 1870, only ·539 inch was measured on 8 days; in 1869 the fall was only ·739 inch on 9 days; and in 1868 ·741 inch fell on but 5 days. In 1912, 3·055 inches fell on 17 days, and in 1913 only ·634 inch on 13 days.

High winds were noted in Dublin on 7 days. Temperature reached or exceeded 70° in the screen on only 3 days, compared with 5 days in 1913, 4 days in 1912, 21 days in 1911, 4 days in 1910, 3 days in 1909, 9 days in 1908 and 1907, 10 in 1906, 17 in 1905, and 10 in 1904. The thermometer never failed to reach 60°. In 1888 the maximum for July was only 68·7°.

Thunder occurred on the 8th, 18th, and 21st; lightning was seen on the 12th and 21st. There was a lunar halo on the 10th.

The rainfall in Dublin during the seven months ending July 31st amounted to 11·244 inches on 114 days, compared with 15·731 inches on 117 days in 1913, 16·811 inches on 27 days in 1912, 10·723 inches on 94 days in 1911, 21·032 inches on 127 days in 1910, 15·377 inches on 106 days in 1909, 13·809 inches on 120 days in 1908, 14·358 inches on 127 days in 1907, 13·664 inches on 122 days in 1906, 11·022 inches on 109 days in 1905, 13·905 inches on 117 days in 1904, 19·072 inches on 131 days in 1903, 15·507 inches on 115 days in 1902, 11·432 inches on 93 days in 1901, only 7·935 inches on 80 days in 1887, and a thirty-five years' (1871-1905) average of 14·710 inches on 113 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. Sidney A. Clark, reports that the mean height of the barometer was 29·855 inches, the range of atmospheric pressure being from 30·17 inches at 9 a.m. of the 10th to 29·60 inches at 9 a.m. of the 2nd. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 59·7°. The arithmetical mean of the daily maximal and minimal temperatures was 59·4°, the mean maximum being 66·3°, and the mean minimum 52·4°. The screened thermometers rose to 75·7° on the 12th, and fell to 45·5° on the 3rd. On the 4th the grass minimum was 41·0°. Rain fell on 17 days to the amount of 2·273 inches, the greatest fall in 24 hours being ·660 inch on the 4th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 157·7 hours, of which 12·1 hours occurred on the 30th. The mean daily duration was 5·1 hours. In July, 1904, there were 201 hours of bright sunshine: in 1905, 162·2 hours: in 1906, 184·8 hours: in 1907, 178·1 hours: in 1908, 174·3 hours: in 1909, 139·8 hours: in 1910, 205·0 hours: in 1911, 221·8 hours: in 1912, 153·0 hours, and in 1913, 157·2 hours. The mean sub-soil temperatures at 9 a.m. were—at 1 ft., 62·0°: at 4 ft., 58·1°.

August.—A warm, but changeable month, with some heavy rainfalls. Outstanding features were the two violent thunderstorms of the 14th, in which an inch of rain fell in Dublin, and a heavy rainfall in this city and the northern half of the County Dublin on the 29th within the limits of an anticyclone, or high pressure system of some intensity. This latter rain-storm was connected with the existence of two air-currents, the upper from S.W., the lower from E. Along the coast-line south of Dublin—that is, under the lee of the Dublin and Wicklow Mountains—the rainfall was scarcely one-half of that recorded in the city and northern suburbs. The thunderstorms of the 14th were of quite exceptional violence—the first prevailing from 6.30 to 7.15 p.m., the second from 9 p.m. till after midnight. The lightning was almost incessant from time to time and the thunder claps occasionally shook the houses, some of which were struck by lightning.

Until the 11th areas of relatively low pressure hovered off the western shores of Ireland and Scotland, causing S.W. winds and frequent showers. An anticyclonic period followed, interrupted on the 14th by a shallow thunderstorm-depression which passed northwards across Ireland. The day named was in Dublin the warmest of the present season, the thermometric range being from 63·0° to 75·9°. A succession of beautiful days followed the thunderstorms of the 14th, and atmospheric pressure was uniformly rather high, with slight gradient, till the 22nd, when a depression of some consequence spread in over Ireland from the Atlantic. A similar system came in on the 25th. In both cases breaks in the weather resulted. After the downpour on the 29th, summer returned, and the month closed warm and fair.

In Dublin the arithmetical mean temperature (61·2°) was 1·5° above the average (59·7°). The mean of the dry-bulb readings at 9 a.m. and 9 p.m. was 59·7°. The mean maximum temperature was 67·4°; the mean minimum was 55·0°. In the forty-nine years ending with 1914, August was coldest in 1912 (M. T. = 54·4°) and in 1881 (M. T. = 57·0°), and warmest in 1899 (M. T. = 63·4°). In 1911 the M. T. was 63·2°. In 1913 it was 59·7°.

The mean height of the barometer was 29·971 inches, or 0·074 inch above the corrected average value for August—namely, 29·897 inches. The mercury rose to 30·361 inches at 9 a.m. of the 31st, and fell to 29·509 inches at 9 a.m. of the 2nd. The observed range of atmospheric pressure was, therefore, 0·852 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 59·7°. It was 0·9° above the value for July, 1914. Using the formula, *Mean Temp.* = *Min.* + (*Max.* − *Min.*) × ·47, the mean temperature was 60·8°, or 1·5° above the average mean temperature for August, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (59·3°). The arithmetical mean of the maximal and minimal readings was 61·2°, compared with a thirty-five years' average of 59·7°. On the 14th the thermometer in the screen rose to 75·9°—wind, E.S.E.; on the 17th, the temperature fell to 48·1°—wind, E. The minimum on the grass was 47·4° on the 5th. August, 1912, established a record for low temperatures.

The rainfall was 3·223 inches on 17 days. The average rainfall for August in the thirty-five years, 1871-1905, inclusive, was 3·240 inches, and the average number of rainy days was 18. The rainfall, therefore, and the rain-days were very slightly below the average. In 1900 the rainfall in August was very large—5·871 inches on 17 days; in 1889, also, 5·747 inches were registered on 22 days. On the other hand, in 1884, only ·777 inch was measured on 8 days. August, 1905, established a record for rainfall in this month in Dublin, for the measurement was 7·019 inches on 22 days, 3·436 inches having fallen on the 25th. In 1912 the rainfall was as much as 5·277 inches on 23 days; in 1913, it was only ·941 inch on 10 days.

Fresh winds were noted on 7 days, but never attained the force of a gale (8). Fogs occurred on the 17th, 19th and 30th. Temperature reached or exceeded 70° in the screen on 6 days, and on 1 day (the 17th) fell below 50°. A lunar halo was seen on the 7th. Thunderstorms occurred on the 2nd, 14th and 26th. Two storms on the 14th were of exceptional violence.

The rainfall in Dublin during the eight months ending August 31st amounted to 14·467 inches on 131 days, compared with 16·672 inches on 127 days in 1913, 22·088 inches on 150 days in 1912, 11·592 inches on 109 days in 1911, 24·382 inches on 149 days in 1910, 16·677 inches on 119 days in 1909, 17·244 inches on 135 days in 1908, 16·588 inches on 146 days in 1907, 15·425 inches on 139 days in 1906, only 9·455 inches on 96 days during the same period in 1887, and a thirty-five years' average (1871-1905) of 17·950 inches on 131 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. Sidney A. Clark, reports that the mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 61·3°. The arithmetical mean of the daily maximal and minimal temperatures was 60·6°, the mean maximum being 68·2°, and the mean minimum 53·0°. The screened thermometers rose to 77·0° on the 14th, and fell to 47·5° on the 12th. On the 12th and 25th the grass minimum was 40·0°. Rain fell on 16 days to the amount of 3·107 inches, the greatest fall in 24 hours being 1·020 inches on the 14th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 194·2 hours, of which 12·0 hours occurred on the 12th. The mean daily duration was 6·3 hours. The mean sub-soil temperatures at 9 a.m. were—at 1 ft., 61·7°; at 4 ft., 58·7°. Belts of dense ground fog were observed at 9 p.m. of the 18th. Thunderstorms occurred on the 14th and 26th.

SEPTEMBER.—A favourable, fine, generally dry month, with a low percentage of cloud (38·8), especially in the evening (28·3 per cent. at 9 p.m.). More than half the rainfall for the whole month in Dublin took place on the night of the 16th, when the measurement was exactly three-quarters of an inch, the total for the month being 1·360 inches. A rainy, unsettled period was ushered in by a brief thunderstorm on the forenoon of the 8th, and rain was recorded daily in Dublin from the 10th to the 16th, inclusive. There was only one rain-day after the 16th, namely, the 22nd, when only ·01 to ·02 was measured at the Dublin observing stations. Up to the 10th the weather was unusually warm: from that date until the 23rd it was equally cold for the time of year, sharp frosts being felt on several nights in the inland districts of both Great Britain and Ireland. After the 22nd there was a considerable recovery of temperature, but the 29th, although very fine, was a cold day, the range of temperature in Dublin being from 45·1° to 56·9° in the daytime and back to 41·0° during the following night.

At the beginning of the month the barometer stood high, and gradients were slight—the result being quite fine, warm weather. After the 6th the distribution of atmospheric pressure was cyclonic until the 20th, when a new anticyclone advanced over Ireland from the westward. In the cyclonic period gradients were not steep until the 11th, but from that day onward to the 19th winds of gale force were reported from one point or other of the British coasts—the gales of the 14th being universal. During the closing days of the month also an anticyclone over Ireland and deep cyclonic depressions passing eastward across the Norwegian Sea and Scandinavia caused severe gales in those regions and on the Scottish coasts.

A succession of beautiful tinted "afterglows" formed a feature of the evening skies towards the close of the month. They were no doubt caused by dust in the atmosphere—possibly the "dust" of battle-smoke connected with the existing European War. At 8.15 p.m. of the 27th a magnificent band of auroral light shot up from the western horizon almost to the zenith. It was connected with a display of aurora borealis.

In Dublin the arithmetical mean temperature (56·5°) was 0·6° above the average (55·9°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 54·7°. In the forty-nine years ending with 1914, September was coldest in 1886 and 1892 (M. T. = 53·0°), and warmest in 1865 (M. T. = 61·4°) and 1898 (M. T. = 60·2°). In 1913 the M. T. was 56·5°.

The mean height of the barometer was 30·070 inches, or 0·160 inch above the corrected average value for September—namely, 29·910 inches. The mercury rose to 30·443 inches at 9 a.m. of the 27th, and fell to 29·310 inches at 3 p.m. of the 14th. The observed range of atmospheric pressure was, therefore, 1·133 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 54·7°, or 5·0° below the value for August, 1914. Using the formula, *Mean Temp.* = *Min.* + (*Max.* - *Min.*) × ·476, the mean temperature was 56·2°, or 0·5° above the average mean temperature for September, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (55·7°). The arithmetical mean of the maximal and minimal readings was 56·5°, compared with a thirty-five years' average of 55·9°. The mean maximum was 62·7°; the mean minimum was 50·2°. On the 2nd the thermometer in the screen rose to 71·2°—wind, calm; on the 21st the temperature fell to 37·8°—wind, N.W. The minimum on the grass was 36·1° on the 21st.

The rainfall was 1·360 inches on 9 days. The average rainfall for September in the thirty-five years, 1871-1905, inclusive, was 2·210 inches, and the average number of rain-days was 15. In 1871 the rainfall was very large—4·048 inches on, however, only 13 days; in 1913 it was 4·310 inches on 13 days; in 1896 no less than 5·073 inches fell on 23 days, establishing a record rainfall for September. On the other hand, in 1865, only ·056 inch was measured on but 3 days. In 1912 only ·570 inch fell on 8 days.

High winds were noted on 9 days, but attained the force of a gale only on the 14th. Fog occurred on the 9th. A solar halo was seen on the 18th and again on the 19th; aurora borealis on the 27th.

The rainfall in Dublin during the nine months ending September 30th amounted to 15·827 inches on 140 days, compared with 20·982 inches on 140 days in 1913, 22·658 inches on 158 days in 1912, 12·599 inches on 120 days in 1911, 25·108 inches on 159 days in 1910, 18·493 inches on 134 days in 1909, 19·557 inches on 154 days in 1908, 17·140 inches on 153 days in 1907, 16·121 inches on 146 days in 1906, only 10·968 inches on 112 days in 1887, and a thirty-five years' average of 20·160 inches on 146 days.

OCTOBER.—October, 1914, was a warm, generally dry month. The mean temperature was 3° in excess and the rainfall was only 43 per cent. of the average, the rain-days (12) being only two-thirds of the average number (18). Until the 21st the weather was for the most part fine, and the air remarkably still for the time of year. These conditions were connected with a high and steady atmospheric pressure. After the 20th the barometer was low and very unsteady, and the weather became broken and rainy—in fact, five-sixths (1·009 inch) of the total precipitation (1·244 inches) of the month occurred in the last week (25th-31st).

The mean height of the barometer was 30·036 inches, or 0·196 inch above the corrected average value for October—namely, 29·840 inches. The mercury rose to 30·503 inches at 9 p.m. of the 4th, and fell to 29·310 inches at 9 p.m. of the 31st. The observed range of atmospheric pressure was, therefore, 1·193 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 51·4°, or 3·3° below the value for September, 1914. The arithmetical mean of the maximal and minimal readings was 52·5°, compared with a thirty-five years' (1871-1905) average of 49·5°. Using the formula, *Mean Temp.* = *Min.* + (*Max.* - *Min.*) × ·485, the mean temperature was 52·4°, or 3·1° above the average mean temperature for October, calculated in the same way, in thirty-five years, 1871-1905, inclusive (49·3°). On the 3rd the thermometer in the screen rose to 64·0°—wind, W.; on the 29th the temperature fell to 38·2°—wind, N.E. The minimum on the grass was 36·6°, on the 20th—wind calm.

In Dublin the mean maximal temperature was 57·2°, compared with the average (54·7°); and the mean minimal temperature was 47·8°, compared with the average, 44·3°. The arithmetical mean temperature (52·5°) was 3·0° above the average (49·5°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 51·4°. In the forty-nine years ending with 1914, October was coldest in 1892 (M. T. = 44·8°) and in 1896 (M. T. = 45·0°). It was warmest in 1908 (M. T. = 55·4°) and in 1912 (M. T. = 54·9°). In 1913, the M. T. was 52·2°.

The rainfall was 1·244 inches, distributed over 12 days. The rainfall and the rain-days were considerably below the average. The average rainfall for October in the thirty-five years, 1871-1905, inclusive, was 2·870 inches, and the average number of rain-days was 18. In 1880 the rainfall in October was very large—7·358 inches on 15 days. In 1875, also, 7·049 inches fell on 26 days. On the other hand, in 1904 only ·454 inch fell on 11 days, in 1890 only ·639 inch fell on but 11 days, in 1884 only ·834 inch on but 14 days, and in 1868 only ·856 inch on 15 days. In 1911, 3·787 inches were recorded on 20 days, in 1912 1·665 inches on 13 days, and in 1913, 3·760 inches on 17 days.

High winds (force 4 to 7) were noted on 3 days, but never attained the force of a gale (force 8). The atmosphere was foggy in Dublin on the 17th, 19th and 23rd. There was a lunar corona on the 5th. Lunar halos were seen on the 2nd, 4th and 27th. An aurora was seen on the 25th. Thunderstorms occurred at 4.30 a.m. and 9 a.m. of the 29th. Hail fell also on that same day.

The rainfall in Dublin during the ten months ending October 31st, 1914, has amounted to 17·071 inches on 152 days, compared with 24·742 inches on 157 days in 1913, 24·323 inches on 171 days in 1912, 16·386 inches on 140 days in 1911, 27·330 inches on 177 days in 1910, 21·106 inches on 158 days in 1909, 12·366 inches on 123 days during the same period in 1887 (the dry year), and a thirty-five years' (1871-1905) average of 23·030 inches on 164 days.

Mr. Sidney A. Clark reports that at the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 30·032 inches, the range of atmospheric pressure being from 30·47 inches at 9 p.m. of the 4th and 9 a.m. of the 5th to 29·33 inches at 9 p.m. of the 31st. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 52·5°. The arithmetical mean of the daily maximal and minimal temperatures was 52·1°. The screened thermometers rose to 65·6° on the 3rd, and fell to 37·0° on the 20th. On the 3rd the grass minimum was 30·0°. Rain fell on 9 days to the amount of 1·235 inches, the greatest fall in 24 hours being ·514 inch on the 31st. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 53·7 hours, of which 5·8 hours occurred on the 3rd. The mean daily sunshine was 1·7 hours. The mean temperature of the soil at 9 a.m. at a depth of one foot was 53·6°; at a depth of 4 feet it was 54·7°.

NOVEMBER.—An unsettled, rainy month, of uncertain but average temperature. The range of atmospheric pressure was large, and the extremes—28·950 inches and 30·618 inches—occurred within three days of each other (15th-18th). The weather was at first open, and singularly mild on the 8th, 9th and 10th, the mean temperature of which three days was as high as 53·8°. A cold period set in on the 14th, and lasted till the 24th. During the cold spell there were some sharp night frosts. Sleet fell on the 14th, when snow lay on the Dublin and Wicklow Mountains down to 2,500 feet. In Great Britain snow was very prevalent over the more northern and north-eastern districts during the opening days of the third week—at Dumfries the depth of snow equalled 4½ inches, at Huddersfield 4 inches, Marchmont 3¾ inches, and Worksop 2½ inches. On the 25th a warm spell succeeded, lasting to the end of the month. It was associated with a very unsteady barometer, strong and blustering S.W. winds, and frequent falls of rain. A thunderstorm occurred in Dublin at 5.35 p.m. of the 2nd, when hail fell.

In Dublin the arithmetical mean temperature (45·5°) was 0·2° above the average (45·3°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 44·6°. In the forty-nine years ending with 1914, November was coldest in 1878 (M. T. = 38·2°), and in 1910 (M. T. = 40·8°); warmest in 1899 (M. T. = 50·7°), and in 1881 (M. T. = 50·3°). In 1913, the M. T. was 47·7°.

The mean height of the barometer was 29·825 inches, or 0·035 inch below the corrected average value for November—namely, 29·860 inches. The mercury rose to 30·618 inches at 9 p.m. of the 18th, having fallen to 28·950 inches at 3 p.m. on the 15th. The observed range of atmospheric pressure was, therefore, 1·668 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 44·6°, or 6·8° below the value for October, 1914. The arithmetical mean of the maximal and minimal readings was 45·5°, compared with a thirty-five years' (1871-1905) average of 45·3°. The mean maximum in the screen was 50·6°, the mean minimum was 40·4°, and the mean minimum on the grass was 39·0°. On the 8th the thermometer in the screen rose to 58·0°—wind, S.W.; on the 19th the temperature fell to 29·2°—wind, W. The minimum on the grass was 28·0°, also on the 19th.

The rainfall was 3·259 inches on 23 days—the rainfall and the rain-days were considerably above the average. The average rainfall for November in the thirty-five years, 1871-1905, inclusive, was 2·720 inches, and the average number of rain-days was 17. In 1888, 6·459 inches fell on 26 days. On the other hand, the rainfall in 1896 was only ·664 inch on 9 days. In 1913 the rainfall was 2·237 inches on 21 days.

High winds were noted on 13 days, and attained the force of a gale (force 8) on 2 days—the 11th and 15th. A lunar halo appeared on the 27th and 28th, and a lunar corona on the 26th. There was a brief thunderstorm on the afternoon of the 2nd, and lightning was seen on the night of the 30th. Hail fell on the 2nd, 11th and 15th, sleet on the 14th. There were fogs on the 3rd and 23rd.

The rainfall in Dublin during the eleven months ending November 30th amounted to 20·330 inches on 175 days, compared with 26·979 inches on 178 days in 1913, 25·761 inches on 185 days in 1912, 19·404 inches on 163 days in 1911, 15·378 inches on 141 days during the same period in 1887, and a thirty-five years' average of 25·750 inches on 181 days.

Mr. Sidney A. Clark reports that at the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29·822 inches, the range of atmospheric pressure being from 29·03 inches at 9 a.m. of the 15th to 30·59 inches at 9 p.m. of the 18th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 46·1°. The arithmetical mean of the daily maximal and minimal temperatures was 45·6°. The screened thermometers rose to 58·7° on the 8th and fell to 28·0° on the 19th. The grass minimum was 22·0° on the 18th. Rain fell on 19 days to the amount of 3·072 inches, ·290 inch being measured on the 11th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 43·3 hours, giving a daily average of 1·4 hours. The mean temperature of the soil at 9 a.m. was 46·7° at a depth of one foot below the surface of the ground, 50·1° at a depth of 4 feet.

DECEMBER.—A severe month of very unsettled weather, much storm and rain at the beginning and close. A finer but very cold spell held from the 18th to the 24th inclusive. There was a very heavy fall of snow in many parts of the United Kingdom on the 28th, and next day the snow lay to the depth of 6 inches at the Curragh of Kildare. During the first 8 days of the month the atmosphere was very disturbed —atmospheric depression after depression swept north-eastwards over the Atlantic and the British Isles in rapid succession and the wind reached gale force day by day at many British and Irish Stations.

After a brief respite from storm on the 9th and 10th, a new large and deep depression arrived off the S.W. of Ireland on the morning of the 11th. This disturbance drifted slowly north-eastwards across the British Isles, reaching Denmark on the 16th. As it approached, it caused a S.E. gale and heavy rainfall on the east coast of Ireland, 1·14 inches of rain being recorded in Dublin and 1·15 inches at Coolagad, Greystones, Co. Wicklow. Dull, cold weather followed in Ireland, but the thermometer rose to 51° in Dublin on the 17th, when S. and S.W. winds of moderate strength prevailed. Next day the thermometer gave way, and a period of sharp cold set in, culminating in a severe frost and rime on the morning of the 22nd. The final change back to stormy, open weather took place early on Christmas morning. A tempest raged from S.S.E. on the night of the 26th, and a downpour of rain on the afternoon of the 28th was followed by a remarkable snowstorm the same evening. A complete thaw occurred on the 30th.

In Dublin the arithmetical mean temperature (40·5°) was 1·5° below the average (42·0°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 39·5°. In the forty-nine years ending with 1914, December was coldest in 1878 (M. T. = 32·8°). and in 1874 (M. T. = 36·8°); warmest in 1898 (M.T. = 47·6°), and in 1900 and 1905 (M.T. = 47·1°). In December, 1912, the M.T. was 46·1°, and in 1913, 42·3°.

The mean height of the barometer was 29·440 inches, or 0·435 inch below the corrected average value for December—namely, 29·875 inches. The mercury rose to 30·209 inches at 9 a.m. of the 24th, and fell to 28·724 inches at 4 p.m. of the 4th. The observed range of atmospheric pressure was, therefore, 1·485 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 39·5°, or 5·1° below the value for November, 1914. Using the formula *Mean Temp.* = *Min.* + (*Max.* − *Min.*) × ·52, the value was 40·6°, or 1·5° below the average mean temperature for December, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (42·1°). The arithmetical mean of the maximal and minimal readings was 40·5°, compared with a thirty-five years' average of 42·0°. On the 6th the thermometer in the screen rose to 53·1°—wind, S.W.; on the 22nd the temperature fell to 22·9°—wind, calm. The observed minimum on the grass was 22·9° on the 22nd. Frost in the screen occurred on 9 nights, and 12 nights of frost on the grass were recorded.

The rainfall was 6·188 inches, distributed over 23 days. The average rainfall for December in the thirty-five years, 1871-1905, was 2·250 inches, and the average number of rain-days was 17. The rainfall, therefore, and also the rain-days were considerably above the average—the rainfall to the amount of 275 per cent. In 1876 the rainfall in December was very large—7·566 inches on 22 days. In 1868 (which was otherwise a fine and dry year), 4·749 inches fell on as many as 27 days. In 1911 also, 4·073 inches fell on 26 days in December. On the other hand, in 1867, only ·771 inch was measured on 13 days; in 1885, only ·742 inch on 10 days; in 1892, only ·795 inch on 10 days; and in 1871, only ·797 inch on 15 days. In 1913, the rainfall was 1·863 inches and the rain-days were 12.

High winds were noted on 14 days, and attained the force of a gale on 8 occasions—the 2nd, 3rd, 4th, 6th, 11th, 25th, 26th, and 27th. The atmosphere was foggy in Dublin on the 9th, 13th, 22nd, 24th, 28th, and 30th. Snow or sleet fell on the 20th, 27th, and 28th; hail on the 20th and 28th. A lunar halo was seen on the 3rd and 26th; a lunar corona on the 27th, 30th and 31st, that of the 31st being beautifully coloured and showing 4 rings. Snow lay during the 29th.

The rainfall in Dublin during 1914 amounted to 26·518 inches on 198 days, compared with 28·842 inches on 190 days in 1913, 27·649 inches on 208 days in 1912, 23·477 inches on 189 days in 1911, 35·439 inches on 219 days in 1910, only 16·601 inches on 160 days in 1887, and a thirty-five years' (1871-1905) average of 28·000 inches on 198 days.

Mr. Sidney A. Clark reports that at the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29·435 inches, the range of atmospheric pressure being from 30·21 inches at 9 a.m. of the 24th to 28·76 inches at 9 p.m. of the 13th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 40·3°. The arithmetical mean of the daily maximal and minimal temperatures was 39·8°. The screened thermometers rose to 55° on the 6th, and fell to 19° on the 22nd. On the 22nd the grass minimum was also 19°. Rain fell on 19 days to the amount of 5·96 inches, the greatest fall in 24 hours being 1·11 inches on the 11th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 28·7 hours, of which 3·8 hours occurred on the 31st. The mean daily sunshine was 0·9 hour. The mean temperature of the soil at 9 a.m. at a depth of one foot was 41·2°; at a depth of 4 feet it was 45·5°.

RAINFALL IN 1914.

At 40 Fitzwilliam Square, West, Dublin.

The rainfall was 26·518 inches, or 1·482 inches less than the average annual measurement of the thirty-five years, 1871-1905, inclusive—viz., 28·000 inches.

It is to be remembered that the rainfall in 1887 was very exceptionally small—16·601 inches. In 1870 only 20·859 inches fell; in 1884 the measurement was 20·467 inches; in 1883 it was 20·493 inches.

The scanty rainfall in 1887 was in marked contrast to the abundant downpour in 1886, when 32·966 inches—or as nearly as possible double the fall of 1887—fell on 220 days. In 1900 the rainfall was 34·338 inches, or 6·338 inches in excess of the average for the thirty-five years, 1871-1905. In 1910, also, the rainfall was very large, 35·439 inches on 219 days. Only once since these records commenced has the rainfall in Dublin exceeded that of 1910—namely, in 1872, when 35·566 inches fell on 238 days. In 1880 34·512 inches were measured on, however, only 188 days.

In 1914 there were 198 "rain-days," or days upon which not less than ·005 inch of rain (five-thousandths of an inch) was measured. This was exactly equal to the average number of rain-days in the thirty-five years, 1871-1905, inclusive. In 1868 and 1887—the warm, dry years of recent times—the rain-days were only 160, and in 1870 they were only 145.

On three occasions in 1914 one inch of rain or upwards fell on a given day in Dublin—viz., August 14th, 1·001 inches; December 11th, 1·141 inches, and December 28th, 1·056 inches. In 1901, the rainfall only once exceeded one inch, but on that occasion (November 11th) the measurement was 2·037 inches. In 1902, 1·342 inches fell on July 25th, and 2·075 inches on September 2nd. An excessive rainfall on August 25th, 1905, is especially noteworthy—it amounted to 3·436 inches in Dublin (Fitzwilliam Square). On no other occasion within the previous 47 years had 3 inches or upwards been measured. It was the ninth occasion only since 1865—that is, in 47 years inclusive—upon which 2 inches have been measured in Dublin at 9 a.m. as the product of the preceding 24 hours' precipitation. The previous excessive falls were—August 13th, 1874 (2·482 inches); October 27th, 1880 (2·736 inches); May 28th, 1892 (2·056 inches); July 24th, 1896 (2·020 inches); August 5th, 1899 (2·227 inches); August 2nd, 1900 (2·135 inches); November 11th, 1910 (2·037 inches); and September 2nd, 1902 (2·075 inches).

The rainfall in the first six months of 1914 was 9·010 inches on 94 days. In the second six months it was 17·508 inches on 104 days.

The rainfall was distributed quarterly as follows:—5·585 inches fell on 57 days in the first quarter, 3·425 inches on 37 days in the second, 6·817 inches on 46 days in the third, 10·691 inches on 58 days in the fourth quarter.

Included in the 198 rain-days in 1914 are 10 on which snow or sleet fell, and 23 on which there was hail. In March hail was observed on 6 days, in April on 5 days, in May on 4 days, in January, June and October on 1 day, in November on 3 days, and in December on 2 days. Snow or sleet fell on 1 day in January, 1 day in February, 4 days in March, 1 day in November, and 3 days in December. Thunderstorms occurred on 3 days in August, and once in September, October, and November, respectively. Thunder was heard without visible lightning once in March, June and August, three times in July. Lightning was seen once in January, February, and March, twice in July, and once in September, November, and December.

More or less fog prevailed on 22 occasions—3 in January, 1 in February, 1 in April, May, and June, 3 in August, 1 in September and November, and 6 in December. High winds amounted to gales (force 8 or upwards, according to the Beaufort scale) on 23 occasions—4 in January, 3 in February, 3 in March, 1 in April, 1 in May and September, 2 in November, and 8 in December.

Solar halos were seen on 11 days, a lunar halo on 11 nights, a lunar corona on 6 nights. A fine pillar aurora borealis was seen on the evening of September 27th.

On February 22nd and 23rd, a cyclone in which the barometer fell to 28·047 inches in Dublin at 9 a.m. of the 22nd, passed in a northerly direction up St. George's Channel and across the Irish Sea and North Channel to the Hebrides, and finally to the Faeroe. At 8 a.m. of the 22nd Lyons reported a wind velocity of 40 metres per second, or 89·5 miles per hour, from the southward. This incident coincided closely with the presence near Dublin of the cyclonic centre in which the barometer, as already stated, fell to 28·047 inches. This was the lowest reading recorded in this city since December 8th, 1886, when the memorable observation of 27·758 inches was made at 2.30 p.m. On that day the minimum recorded at the Observatory of the Ordnance Survey Office, Phœnix Park, was 27·766 inches, being the lowest reading noted at that station since the year 1829. On November 28th, 1838, the barometer fell to 27·769 inches at the Ordnance Survey Office at 8 p.m. From the above statements, it will be seen that the low reading of 28·047 inches does not come within a quarter of an inch of the low atmospheric pressures in 1829, 1838, and 1886. The nearest approach to it was the extremely low reading of 28·077 inches in Dublin on March 15th, 1905, nearly ten years ago.

The Rev. Arthur Wilson, M.A., writing from the Rectory, Dunmanway, Co. Cork, states that the rainfall for the year 1914 was 68·59 inches on 226 days, which is 10·633 above the average of the last 9 years (57·967). The number of days with rain was 2 under the average (228). The rainfall was the heaviest of any year in the last decade and was 1·96 inches heavier than that of 1913. It is remarkable that each of the last four years has had a rainfall of from 10 to 14 inches over the average of the previous 6 years, and yet each year had spells of exceptionally dry weather—*i.e.*, the first 18 days of July, 1911, April and September in 1912, July and August in 1913, and the second half of April and May and the whole of June—except the 19th and 21st—in 1914. The end of September and beginning of October, as well as parts of November, were all very fine in 1914. There were 12 days with more than one inch of rain, and though the heaviest of these falls between 9 a.m. and 9 a.m. the next day was 1·70, yet 2 inches within 24 hours fell on March 28th and November 14th and 15th, and nearly that amount on Christmas Day. The average rainfall of the six years 1905 to 1910 was 54 inches, and of last 4 years 66·57 inches.

No. 10749.

DUBLIN CASTLE,

5th July, 1915.

SIR,

I have to acknowledge the receipt of your letter of the 1st instant, forwarding, for submission to His Excellency the Lord Lieutenant, the Fifty-first Detailed Annual Report of the Registrar-General for Ireland on Marriages, Births and Deaths for the year 1914.

I am,
Sir,
Your obedient Servant,
E. O'FARRELL.

The Registrar-General,
General Register Office,
Dublin.

DUBLIN: Printed for His Majesty's Stationery Office,
By ALEX. THOM & Co. (Limited), 87, 88, & 89, Abbey-street.
